#### Conversion factors

- Tables 2 and 3 presents the proportion of milk produced on the farm and which enters commercial channels as whole milk and the proportion sold as cream. The difference between 100 percent and the sum of these two percentages gives a very rough approximation of the proportion consumed on the farm as whole milk or cream, made into butter on the farm, fed to calves, waste, and net errors in conversion factors. The conversion factors used in determining the proportion of milk produced which was sold as cream follow:

1. Includes farms with usable reports for value of farm products sold, traded, or used by farm households; but excludes 80,925 farms with no products sold, traded, or used by farm households, and also 38,427 unclassified farms. "Farms with major source of income from dairy products sold or traded" includes poultry, hogs, and fur-bearing animals. "Value of sales for first-hand products included within 'Field crops', not with 'Vegetables.'" The number of farms reporting "horticultural specialties" shown in this table includes only those reporting sales in 1939. Unless otherwise noted, percentages are of the total.
