*Note: Level 1 should be used in determining the sampling reliability of estimated number of farms and farms reporting. The level for all other items should be obtained from State Table 41. If the estimated number of farms or farms reporting were more than 75 percent of all farms in the universe, a better approximation to the sampling reliability may be obtained by multiplying the percent given in the table as follows: 1. When the number of farms or farms reporting is 75 percent of all farms, multiply the percent error by 0.80. 2. When the number of farms or farms reporting is 50 percent of all farms, multiply the percent error by 0.50. 3. When the number of farms or farms reporting is 25 percent of all farms, multiply the percent error by 0.20.
