# Coffee: World Markets and Trade

## Brazil's Off-Year Cycle and Central America/Mexico's Rust Lower World Production

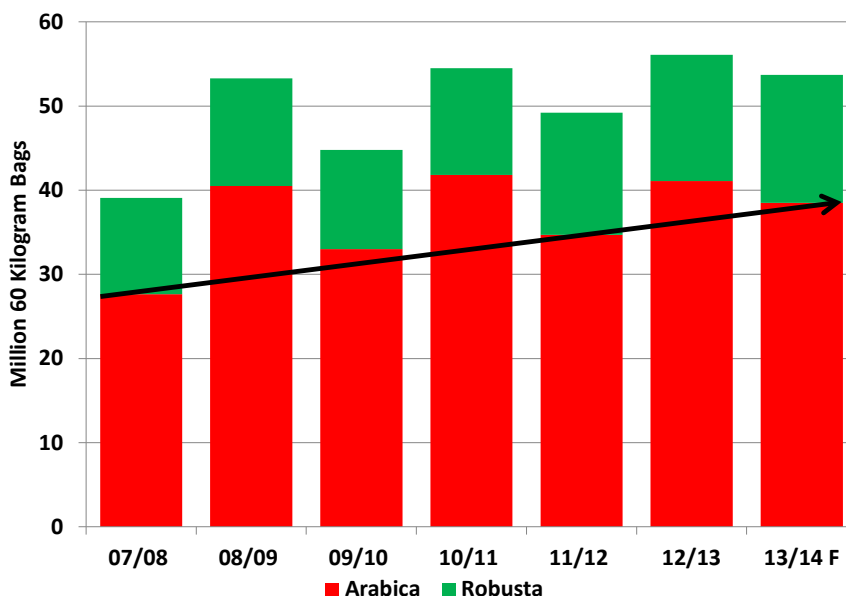

World coffee production for 2013/14 is forecast at 146 million bags, down 4.4 million bags from the previous year due primarily to Brazil's Arabica trees entering the off-year of the biennial production cycle, and to a lesser extent, Central America and Mexico's continued struggle with coffee leaf rust. Global bean exports are forecast just below last year's record, while consumption is expected to rise modestly.

## 2013/14 Forecast Overview

**Brazil's** production is forecast at 53.7 million bags, down 2.4 million from the previous year due primarily to Arabica trees entering the off-year of the biennial production cycle. Though the year-over-year difference in Arabica output is expected to narrow, last year was affected by frost and dry conditions in Minas Gerais, its main growing region. More importantly, Arabica's off-year forecast continues the biennial growth trend. The Robusta harvest is forecast to continue expanding as favorable weather and good crop management aided fruit settings and

development in Espirito Santo, where the vast majority is grown. Bean exports are forecast flat at 27.5 million bags, while ending stocks are expected to rise a second consecutive year. The higher stocks will provide additional cushion should there be a future supply shortage.

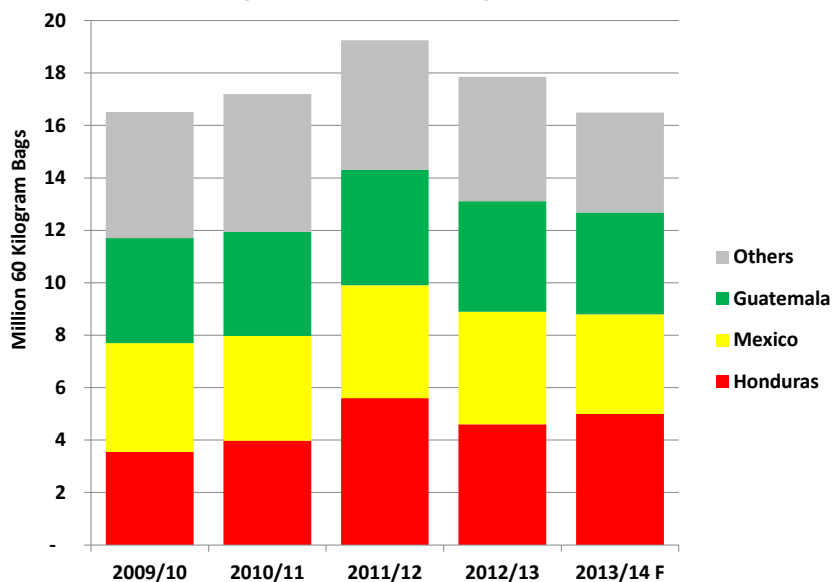

**Brazil's Off-Year Arabica Production to Continue Growth Trend**

## Central America and Mexico

account for one-fifth of the world's Arabica production. The region's production is forecast to decline 1.4 million bags to 16.5 million due to lower yields from coffee rust. The disease attacks the underside of the leaf, causing it to yellow and drop prematurely, reducing photosynthetic capacity and yield. El Salvador is forecast to decline 29 percent, followed by Nicaragua (-19%), Costa Rica (-15%), Mexico (-12%), Panama (-11%), and Guatemala (-8%). However, Honduras is expected to rebound 9 percent with the maturation of new trees. As a result of lower exportable supplies from the region, bean exports are forecast to decline 1.1 million bags to 14.0 million.

**Rust to Again Reduce Region's Production**

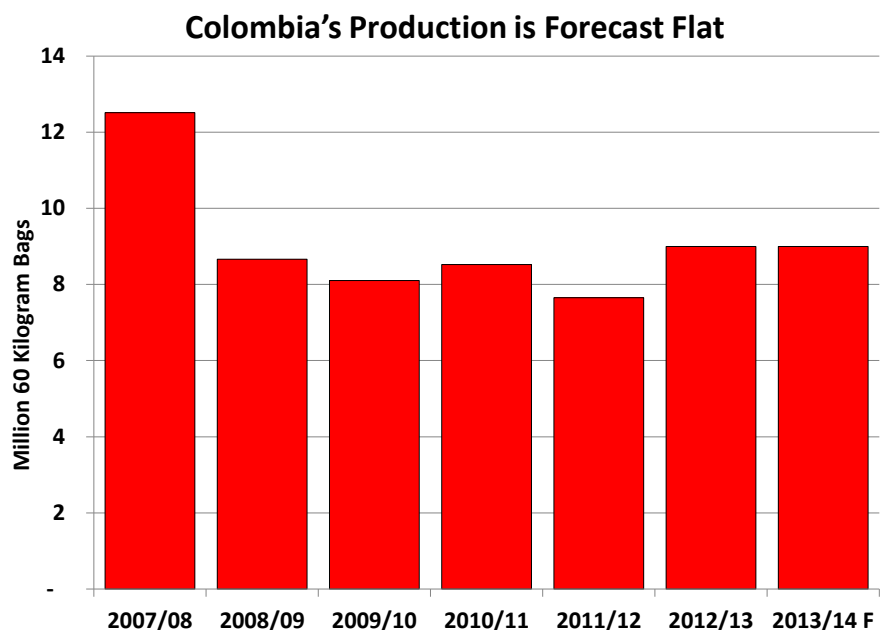

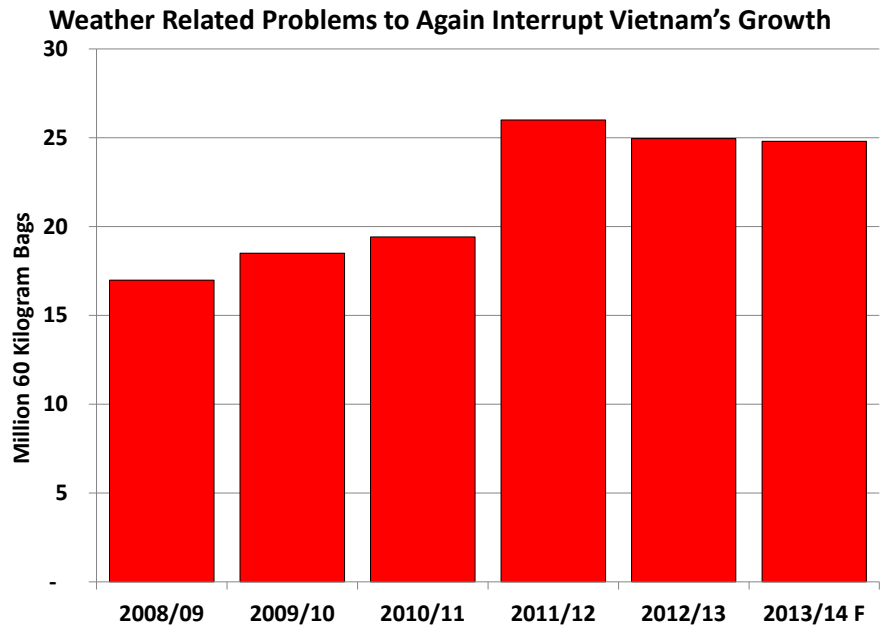

**Indonesia's** production is forecast to drop 1.3 million bags to 9.2 million. The vast majority of growing regions had drought conditions during the flowering period, followed by heavy rains that caused many developing cherries to drop before the harvest. As a result of lower exportable supplies, bean exports are forecast to decline 1.3 million bags to 5.6 million. Since 2007, the Indonesian Ministry of Agriculture has encouraged new plantings, area expansion, and better cultivation practices. However, these efforts have not yet significantly enhanced production.

**Vietnam's** production is forecast at 24.8 million bags, down marginally as weather related problems again stymied its growth trend. The beginning of the rainy season got off to a dry start, followed by below-average precipitation. Bean exports are forecast to decline 200,000 bags to 23.0 million, while consumption is expected to continue rising as the coffee consuming culture spreads.

**Colombia's** production is forecast at 9.0 million bags, equal to the previous year, but still 3.5 million below the 2007/08 pre-crisis level. Output has struggled to fully recover from the affects of La Niña, which facilitated the spread of coffee rust and coffee cherry borer. Also, an aggressive renovation program that began several years ago had the near-term effect of limiting production, because approximately one-third of the coffee area was replanted with rust resistant varieties. Bean exports are forecast to gain 300,000 bags to 8.0 million, drawing inventories lower.

**India's** production is forecast virtually unchanged at 5.2 million as modest gains from Arabica's on-year cycle are offset by lower Robusta output. Bean exports are forecast unchanged at 3.75 million bags. Higher input

costs, along with the elimination of subsidies for fertilizer and diesel have increased production costs for growers. Labor expenses, which can account for more than 50 percent of the cost of cultivation, continue to escalate, while greater off-farm employment opportunities have created labor shortages. The adoption of mechanization has been slow and limited to a few plantations because of uneven terrain and small, fragmented growing areas.

The **EU** accounts for nearly half of world bean imports and is forecast to decrease slightly to 44.3 million bags. Top suppliers include Brazil (30%), Vietnam (20%), Peru (6%) and India (6%). Ending stocks as well as consumption are forecast to decrease incrementally.

The **United States** imports the second-largest amount of coffee beans and is forecast to decrease marginally to 22.2 million bags. Top suppliers include Brazil (25%), Vietnam (18%) and Colombia (13%). Both consumption and ending stocks are forecast flat.

## Revised 2012/13

World **production** is revised down from the December estimate by 600,000 bags to 150.7 million.

- Central America and Mexico combined are revised down 1.5 million bags to 17.9 million due to coffee rust.
- Peru is revised down 500,000 bags to 4.3 million due to coffee rust.
- Papua New Guinea is revised down 300,000 bags to 850,000.
- Colombia is revised up 1.5 million bags to 9.0 million on unusually strong April and May deliveries from producers as reported by the National Federation of Coffee Growers.
- Indonesia is revised up 800,000 bags to 10.5 million due to increased yields following higher than average rainfall.

World **bean exports** are lowered 2.1 million bags to 101.4 million.

- Brazil is revised down 2.1 million bags to 27.5 million on stronger-than-anticipated ending stocks.
- Central America and Mexico combined are revised down 725,000 bags to 15.8 million due to lower exportable supplies.
- Peru is revised down 500,000 bags to 4.1 million due to lower exportable supplies.
- Papua New Guinea is revised down 300,000 bags to 800,000 due to lower exportable supplies.
- Vietnam is revised up 1.2 million bags to 23.2 million on weaker-than-anticipated ending stocks.
- Colombia is revised up 1.2 million bags to 7.7 million due to higher exportable supplies.
- Indonesia is revised up 800,000 bags to 6.9 million due to higher exportable supplies.

Coffee marketing year for producer countries begins either in October (Colombia), April (Indonesia) or July (Brazil), as examples.

Coffee marketing year for non-producer countries begins in October.

Bean export and bean import data exclude soluble trade.

Soluble trade data is in Tables 6C and 7C and total trade is in Tables 6A and 7A.

A conversion factor of 2.6 was used to convert soluble coffee to the green bean equivalent.

Coffee marketing year for producer countries begins either in October (Colombia), April (Indonesia) or July (Brazil), as examples.

Coffee marketing year for non-producer countries begins in October.

For each non-producing country, the balance between imports and exports was used in order to remove double-counting from these trade figures.

Coffee marketing year for producer countries begins either in October (Colombia), April (Indonesia) or July (Brazil), as examples.

Coffee marketing year for non-producer countries begins in October.

For each non-producing country, the balance between imports and exports was used in order to remove double-counting from these trade figures.
