World Agricultural Production

Serbia - Montenegro and Croatia Corn: Summer Rains Produce Record Crops

The Balkan region harvested a very large corn crop in 2005/06 as plentiful rainfall boosted the summer crop's yield to record levels in many countries. The combined factors of an above-average rainfall during the summer growth stage and a dry milder fall harvesting period, resulted in above-average to record yields in these countries.

Serbia and Montenegro, one of the largest non-EU corn producing countries in Europe, is estimated to have harvested 7.0 million tons of corn in 2005/06, up 0.7 million from both last month's estimate and last year. Area is estimated at 1.2 million hectares, down slightly from last month, but remaining on par with last year's 1.2 million. Yield is estimated at a record 5.74 tons per hectare, up 14 percent from last month and 10 percent from last year. Corn production in Croatia is estimated at a record 2.5 million tons, up 0.5 million from last month and up 0.3 million from last year. Harvested area is estimated at 0.4 million hectares, unchanged from both last month and last year. Yield is estimated at a record 6.25 tons per hectare, up 25 percent from last month and 14 percent from last year. (For more information, contact Bryan Purcell at 202-690-0138.)

Argentina Corn: Heat and Dryness Cause Significant Damage to Crop

Argentina's corn production for 2005/06 is forecast at 15.5 million tons, down 8 percent from last month and down 21 percent from last year. Harvested area for 2005/06 is forecast at 2.30 million hectares, down 4 percent from last month and down 15 percent from last year. Yield is forecast at 6.74 tons per hectare, which is down 4 percent from last month and down 7 percent from last year. As of January 26, planting was 98 percent complete, compared to 99 percent complete at this time last year. Some area is left to be planted in Santiago del Estero; Avellanda, Santa Fe; and Río Cuarto, Córdoba. There are two main reasons for the overall decrease in area from last year. First, many producers planted less area to corn to reflect last year's

on-farm oversupply. Secondly, dryness and severe heat during the tasseling stage in early January drastically affected crop development, thus increasing forecast harvest losses. While Argentina's corn yields have generally increased since the early 1990's, the particularly inopportune weather during the vulnerable stage of tasseling this year has significantly damaged the corn crop and reduced yield potential. *(For more information, contact Nicole Wagner at 202-720-0882.)*

South American Soybeans: Yields Maintained in Argentina and Brazil, Decreased in Paraguay

Dryness coupled with extreme heat in early January threatened yield potential in much of the soybean-growing regions of South America. Since the soybean crop was in the vegetative stage in early January and above average precipitation was received in Argentina and Brazil immediately following the heat wave, little yield potential was lost as crop development benefited from the significant moisture. Paraguay's crop suffered from continued dryness that damaged the already stressed soybean crop. Therefore, USDA has reduced its estimate of soybean production in Paraguay to 4.5 million tons, down from last month's estimate of 4.8 million. Harvested area in Paraguay is unchanged from last month's estimate of 2.0 million hectares.

China Cotton: Production in 2005/06 Revised Upward

China's 2005/06 cotton production is estimated at 26.2 million bales (5.7 million tons), up 1.7 million from last month, but down 2.8 million from last year. Area is estimated at 5.1 million hectares, unchanged from last month, but down 10 percent from a year ago. The estimated yield of 1119 kilograms per hectare is up slightly from last year and above the 5-year average. In January, China's National Bureau of Statistics (NBS) announced that cotton production in 2005/06 totaled 5.7 million tons, down more than 9 percent from last year. The NBS estimate was higher than earlier estimates by other Chinese government sources but in line with other industry forecasts.

Cotton area in 2005/06 dropped in most provinces in response to lower profits after the bumper 2004/05 crop and government policies that encouraged farmers to plant more grain. The weather was favorable during the first half of the growing season on the North China Plain, but unusually wet and stormy weather from August to October caused production losses and quality damage in several provinces. Below average yields are estimated in Anhui, Jiangsu, Henan and Hubei provinces due to excessive late-season rainfall. In contrast, Hebei and Shandong experienced generally favorable weather and good yields. Local officials in the northwest province of Xinjiang reported that higher area and good weather resulted in record yield and production this year, partially offsetting losses elsewhere. *(For more information, contact Paulette Sandene at 202-690-0133.)*

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic and satellite imagery. Estimates of foreign area, yield, and production are from the Production Estimates and Crop Assessment Division, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-431), Feb. 9, 2006.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS Production Estimates and Crop Assessment Division prepared this report. The next issue of World Agricultural Production will be released after 9:00 a.m. Eastern Time, March 10, 2006.

TABLE 18

The table below presents a 24-year record of the differences between the February projection and the final estimate. Using world wheat production as an example, changes between the February projection and the final estimate have averaged 2.2 million tons (0.4 percent) and ranged from -7.3 to 6.8 million tons. The February projection has been below the final 17 times and above the final 7 times.

1/ The final estimate for 1981/82-2004/05 is defined as the first November estimate following the marketing year.

2/ May not total 24 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
