World Agricultural Production

Brazil: Good Conditions for First-Crop Corn Boost Harvest Prospects

Brazil corn production for 2010/11 is forecast at 53.0 million tons, up 2.0 million or 4 percent from last month, but down 3.1 million or 6 percent from last year. Harvested area is estimated at 12.90 million hectares, up 0.15 million or 1 percent from last month and down 0.03 million or 1 percent from last year. Yield is forecast at 4.11 tons per hectare, up 3 percent from last month but down 5 from last year.

Approved by the World Agricultural Outlook Board

Brazil has two corn crops. The first is a long-season crop that is planted in late September. The long-season crop is currently maturing and is in good condition. The second is the *safrinha* crop, which is grown mainly in the center-west region. *Safrinha's* share of the country's corn crop has increased significantly during the past five years, to nearly 40 percent of Brazil's total corn output. *Safrinha* corn is planted immediately after the harvest of the early-maturing soybeans, but soybean harvest delays have resulted in a high occurrence of the *safrinha* corn being planted beyond the normal planting window, which typically ends in late February. Final yields for *safrinha* corn will depend largely on precipitation from March through early May. (*For more information, contact Bill Baker at 202-260-8109.*)

Argentina: Estimated Record Yield for Wheat

The USDA forecasts Argentine wheat production for 2010/11 at 15.0 million tons, up 36 percent from last year. Area is estimated at 4.3 million hectares, up nearly 18 percent from last year. Yield is estimated at a record 3.49 tons per hectare, up 16 percent from last year and substantially higher than the five-year average of 2.58 tons per hectare.

Low soil moisture caused some concern at the onset of planting, but timely rains in early November allowed high prices to push more area into wheat than last year. Frequent rains throughout the season were beneficial and increased yields more than expected. Harvest is in progress. (*For more information, contact Arnella Trent at 202-720-0881.*)

Australia: Wheat Prospects Stable Despite Poor Crop Conditions in the West and Delayed Harvest in the East

Australia's 2010/11 wheat harvest is complete, with the majority of the crop already delivered to bulk handlers. The USDA estimates production at 26.0 million tons, up 1.0 million or 4 percent from last month, and up 4.0 million or 19 percent from last year. Estimated output is the highest in 7 years. The area is estimated at 13.4 million hectares, down 5 percent from last year. The yield is forecast at 1.95 tons per hectare, 25 percent higher than last year.

The major wheat cropping areas in New South Wales, Queensland, Victoria and South Australia experienced overall excellent water availability and favorably cool weather throughout the growing season. Although excessive rainfall in eastern Australia from late November through early January resulted in harvest delays and a likely reduction in grain quality, the wheat crop along the east coast is reported to be the highest in many years. Western Australia experienced one of the worst seasons for wheat and other winter crops in over 40 years, with low soil moisture and above-average temperatures throughout the season for much of the west coast. Wheat output in Western Australia turned out to be better than previously projected. The yield gains in New South Wales, Queensland, Victoria, and South Australia offset the year-to-year decline in Western Australia. (*For more information, contact Dath Mita at 202-720-7339*)

Mexico: Cold Snap Destroys Winter Corn in Sinaloa

The USDA forecasts Mexican corn production for 2010/11 at 22.0 million tons, down 8 percent from last month but up 8 percent from last year. Area is estimated at 6.6 million hectares, down 5 percent from last month but up 5 percent from last year. A cold snap in early February that lasted nearly a week damaged winter corn in the state of Sinaloa, with temperatures plunging to minus 8 degree Celsius in some locations. On February 4, the coldest night, 14 of 32 temperature stations reported values of minus 1 degree or lower. Frost damage for corn occurs when the temperatures drop below -1 degree Celsius. Sinaloa plants approximately 1.3 million hectares of corn and produces roughly 4.5 million metric tons, or around 25 percent of Mexico's total corn production. Industry sources estimate that 90 percent of Sinaloa's corn crop – roughly 90,000 hectares – may have been damaged by the prolonged below-normal temperatures. Mexico produces two corn crops: spring/summer and fall/winter. The fall/winter crop accounts for 25 percent of the country's total corn production, and 75 percent of the winter corn is produced in Sinaloa. The rest is grown in the Tamaulipas and Veracruz area. Sinaloa corn is sown in December and January and harvested in May/June, and nearly all is irrigated. *(For more information, contact Arnella Trent at 202-720-0881.)*

Brazil: Estimated Soybean Production Increased

Brazil soybean production for 2010/11 is estimated at 70.0 million tons, up 1.5 million or 2 percent from last month, and up 1.0 million or 1 percent from last year. Harvested area is estimated at 24.25 million hectares, unchanged from last month but up 0.75 million or 3 percent from last year. Yield is estimated at 2.89 tons per hectare, up 2 percent from last month but down 2 percent from last year. The soy crop is in good condition. Harvest is underway, with progress slightly behind average and yields reported as average to above average. Harvest delays are attributed to late planting (due to low soil moisture when farmers were ready to plant) and frequent rain during February. The wet weather has led to occurrences of fields being harvested with a high grain moisture content. Some soybean fields were “terminated” (treated with chemicals to enable farmers to begin harvesting soybeans that were not yet fully mature) so that they could begin planting the second (*safrinha*) cotton and corn crops. Now that the window to plant the *safrinha* crops has closed, the harvest of later-planted and longer-season soybeans will begin. *(For more information, please call Bill Baker at 202-260-8109.)*

China Soybean Revisions for 2009/10 and 2010/11

China's 2010/11 soybean production is estimated at 15.2 million tons, up 0.8 million or 6 percent from last month and 0.2 million or 1.5 percent from last year's revised estimate. Area is estimated at 8.8 million hectares, up 5 percent from last month but down 4 percent from last year. Farmers planted less soybean acreage in 2010 because profits were higher for alternative crops such as rice and corn. The estimated yield of 1.73 tons per hectare is up 6 percent from the drought-impacted crop of 2009/10 and above the 5-year average. The weather in 2010 was generally favorable for soybean growth in Northeast China, where more than 50 percent of the crop is produced. The area and production estimates for 2009/10 were revised upward to 9.2 million hectares and 15.0 million tons based on official government statistics. *(For more information, contact Paulette Sandene at 202-690-0133.)*

Australia: Record Cotton Crop Forecast

The USDA forecasts Australia's 2010/11 cotton production at 4.5 million 480-pound bales, up 0.5 million or 13 percent from last month and 154 percent from last year. Harvested area is forecast at 0.6 million hectares, up 7 percent from last month, and up 0.4 million or 200 percent from last year. The yield is forecast at 1633 kg/ha, up 5 percent from last month but down 15 percent from last year.

Australia cotton is at advanced flowering to boll formation stages. The favorable planting conditions, combined with rising cotton prices, led to increased plantings of both irrigated and dryland cotton. Most cotton growing regions in New South Wales and Queensland experienced above-normal winter and spring rainfall resulting in excellent planting conditions in October and November. Irrigation water is plentiful, with improved on-farm reservoirs and water allocations up 100 percent.

From late November to early January, rainfall was excessive in some major cotton growing areas of central-south Queensland and northern New South Wales. This caused moderate to excessive flooding in some areas. Although the floods had devastating impact in certain areas, field observations made by crop-assessment specialists from the USDA Foreign Agricultural Service indicate that most cotton growing areas actually experienced limited flood damage and the majority of cropping areas are now benefiting from the improved soil moisture profiles and the abundant irrigation reserves. Prospects are high for both yields and total harvested areas and by all estimates the Australian cotton industry is on track for a record cotton harvest. (*For more information, contact Dath Mita at 202-720-7339*)

Brazil: Estimated Cotton Production Increased

Brazil cotton production for 2010/11 is estimated at 8.80 million bales, up 0.60 million bales or 7 percent from last month and up 3.35 million bales or 61 percent from last year. Harvested area is estimated at 1.30 million hectares, 7 percent from last month, and up 56 percent from last year. Yield is estimated at 1,474 kilograms per hectare, nearly unchanged from last month, but up 6 percent compared to last year.

The early-planted, long-season cotton crop is setting bolls and is in good condition. A reduction in the area sown to soybeans in the center-west region (due to wet planting weather) coupled with high cotton prices provided incentive for farmers to increase first-season cotton area. The second-season (*safrinha*) cotton crop is planted immediately after the harvest of the early maturing soy crop in mid-January, but weather-related harvest delays for soybeans in the center-west region has resulted in late planting *safrinha* cotton. Final yields for *safrinha* cotton typically depend in large part on the amount of rainfall received before the dry season arrives in early May. (*For more information, please call Bill Baker at 202-260-8109.*)

India's Cotton Production Revised Downward

India's 2010/11 cotton production is estimated at 25.0 million 480-pound bales, down 4 percent from last month, but up 2 million or 9 percent from last year. Area is estimated at 11 million hectares, a 7 percent upward change from last year. The yield is 495 kilograms per hectare, slightly up from last from last year.

The 2010 monsoon rainfall progressed well. In general, cumulative rainfall was very favorable compared to the previous year, promoting good crop development. According to the provisional planting estimates from the Ministry of Agriculture in India, cotton plantings in the major producing areas increased from last year. Encouraged by relatively favorable early-season rainfall, high domestic prices, and anticipated export demand, cotton growers in the States of Gujarat, Maharashtra and Madhya Pradesh significantly increased planted area compared to last year. As of December, the majority of the crop was in advanced maturity stages and rated in mostly fair to good condition. Harvest is underway and progressing well in most areas. Deliveries to ginning facilities are higher than last year in several states, including Punjab, Gujarat, and Madhya Pradesh, although recent market arrivals indicate a smaller crop than previously projected. This is due in large part to drier-than-normal weather toward the end of the season, especially in Gujarat. The poor late-season weather has resulted in declining yield prospects. *(For more information, contact Dath Mita at 202-720-7339)*

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield and production are from the International Production Assessment Branch, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-492), March 10, 2011.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, April 8, 2011.

TABLE 18

The table below presents a 29-year record of the differences between the March projection and the final estimate. Using world wheat production as an example, changes between the March projection and the final estimate have averaged 2.6 million tons (0.5 percent) and ranged from -8.0 to 6.9 million tons. The March projection has been below the final 20 times and above the final 9 times.

RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2009/10 1/

1/ The final estimate for 1981/82-2009/10 is defined as the first December estimate following the marketing year.

2/ May not total 28 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
