

Agricultural Prices

ISSN: 1937-4216

Released October 31, 2011, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, United States Department of Agriculture (USDA).

Special Note

Due to funding reductions, this is the last scheduled release of sheep and lamb prices in the Agricultural Prices report. For more information, refer to http://www.nass.usda.gov/Newsroom/Notices/10_17_2011.asp.

October Farm Prices Received Index Increased 6 Points

The preliminary All Farm Products Index of Prices Received by Farmers in October, at 185 percent, based on 1990-1992=100, increased 6 points (3.4 percent) from September. The Crop Index is up 3 points (1.5 percent) and the Livestock Index increased 1 point (0.7 percent). Producers received higher prices for cattle, eggs, hogs, and sweet corn and lower prices for corn, milk, wheat, and soybeans. In addition to prices, the overall index is also affected by the seasonal change based on a 3-year average mix of commodities producers sell. Increased monthly movement of soybeans, corn, grain sorghum, and sunflowers offset the decreased marketing of wheat, milk, hogs, and hay.

The preliminary All Farm Products Index is up 34 points (23 percent) from October 2010. The Food Commodities Index, at 173, increased 6 points (3.6 percent) from last month and increased 26 points (18 percent) from October 2010.

Prices Paid Index Unchanged

The October Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) is 205 percent of the 1990-1992 average. The index is unchanged from September but 20 points (11 percent) above October 2010. Higher prices in October for feeder cattle, complete feeds, concentrates, and supplements offset lower prices for diesel, feed grains, LP gas, and gasoline.

¹ Simple average required for parity regulations. Weighted 1990-1992 average equals 100. Average is year-to-date for current year.

Reliability of Prices Received Estimates

Definition: Prices received represent sales from producers to first buyers. They include all grades and qualities. The average commodity price from the survey multiplied by the total quantity marketed theoretically should give the total cash receipts for the commodity.

Survey procedures: Primary sales data used to determine grain prices were obtained from probability samples of about 1900 mills and elevators. These procedures ensure that virtually all grain moving into commercial channels has a chance of being included in the survey. Generally, States surveyed account for 90 percent or more of total United States production. Livestock prices are obtained from packers, stockyards, auctions, dealers, and market check data from AMS-USDA, private marketing organizations, and state commodity groups and agencies. Inter-farm sales of grain and livestock are not included since they represent very small percentages of the total marketings. Grain marketed for seed is also excluded. Fruit and vegetable prices are obtained from sample surveys and market check data from AMS-USDA, private marketing organizations, state agencies, and universities.

Summary and estimation procedures: Survey quantities sold are expanded by strata to state levels and used to weight average strata prices to a state average. State prices are then weighted to a United States price based on expanded marketings. Recommendations are prepared by the State Field Offices and reviewed by the Agricultural Statistics Board in Washington, D.C. State recommendations are reviewed for reasonableness with survey data, other States, and recent historic estimates.

Revisions: For most items, the current month's preliminary price represents a 3-5 day period around the 15th of the month. Previous month's prices represent actual dollars received for quantities sold during the entire month. Revisions are published in monthly issues of Agricultural Prices.

Reliability: United States price estimates based on probability surveys generally have a sampling error of less than one percent for the major commodities such as corn, wheat, soybeans, cotton, and rice. Current methods of summarization for non-probability commodities are not designed directly to calculate sampling errors. However, analytical measures approximate the United States relative sampling errors at around five percent. Any nonsampling errors are attributed to such things as the inability to obtain correct information, differences in interpreting questions or definitions, mistakes in coding or processing the data, etc. Efforts are made at each step in the survey process to minimize these nonsampling errors.

Prices Paid by Farmers

The October Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) at 205 (1990-1992=100), unchanged from September 2011 but up 11 percent from October 2010.

Production index: The October index, at 217, was unchanged from last month but increased 14 percent from last year. Higher prices in October for feeder cattle, complete feeds, concentrates, and supplements offset lower prices for diesel, feed grains, LP gas, and gasoline.

Feed: The October index, at 241, increased 1.7 percent from September and 28 percent from last October. Since September, higher prices for complete feeds, concentrates, supplements, and hay & forages more than offset lower prices for feed grains.

Livestock and poultry: The October index, at 150, increased 2.7 percent from last month and 14 percent from last year. Since September, prices for feeder cattle and feeder pigs are higher. The October feeder cattle price, at \$131.80 per cwt, is up \$4.40 per cwt from the September price. October feeder pigs averaged \$103.00 per cwt, up \$4.00 per cwt from September.

Fertilizer: The October index, at 330, is unchanged from September but 24 percent above October a year ago. Since September, higher prices for potash & phosphate and mixed fertilizer offset lower prices for nitrogen.

Chemicals: The October index, at 152, increased 2.7 percent from September and 4.1 percent from last October. Compared with last month, prices for herbicides, insecticides, and fungicides/other are higher.

Fuels: The October index, at 354, is down 3.0 percent from a month earlier but 22 percent above October 2010. Compared with last month, prices for diesel, LP gas, and gasoline are lower.

Machinery: The October index, at 242, was unchanged from September but is 4.3 percent above last October. Compared with last month, prices for self-propelled machinery and other machinery are higher.

Consumer price index: The September 2011 Consumer Price Index, as issued by the Bureau of Labor Statistics, for all urban consumers (CPIU) increased 0.2 percent before seasonal adjustment to a level of 226.889 (1982-1984=100). The August index is 226.545. For the 12 month period ending in September, the overall index increased 3.9 percent.

¹ Effective January 1995, prices of commercial prepared feeds are based on current United States prices received for corn, soybeans, alfalfa hay, and all wheat.

² The price of commercial prepared broiler feed is based on current United States prices received for corn and soybeans. The modeled feed uses 58 percent corn and 42 percent soybeans.

³ The price of commercial prepared layer feed is based on current United States prices received for corn and soybeans. The modeled feed uses 75 percent corn and 25 percent soybeans.

⁴ The price of commercial prepared dairy feed is based on current United States prices received for corn, soybeans, and alfalfa hay. The modeled feed uses 51 percent corn, 41 percent alfalfa hay, and 8 percent soybeans.

⁵ The price of commercial prepared turkey feed is based on current United States prices received for corn, soybeans, and wheat. The modeled feed uses 51 percent corn, 28 percent soybeans, and 21 percent wheat.

¹ Simple average and is year-to-date for current year.

Reliability of Prices Paid Estimates

Definition: Prices paid by farmers represent the average costs of inputs purchased by farmers and ranchers to produce agricultural commodities. Conceptually, the average price when multiplied by quantity purchased should equal total producer expenditures for the item.

Survey procedures: The prices paid data are obtained from establishments that sell goods and services to farmers and ranchers. Annually, about 8,500 firms are randomly selected from lists by type of item sold with an average response rate in the range of 75-80 percent. Firms are asked to report the price for the specified item "most commonly bought by farmers" or that was the "volume seller". Approximately 135 items are surveyed each March to represent all production input items purchased. The survey reference period for most items is the five business days centered around the 15th of the month. Separate prices paid surveys are conducted for agricultural chemicals, fuels, feed, fertilizer, machinery, and seed.

Summary and estimation procedures: The annual March Prices Paid Survey is summarized as a nonprobability survey. Average prices reported are aggregated to the region and United States level using weights available from expenditure data and other administrative sources. Price recommendations are prepared by the State Field Offices and Headquarters for review by the Agricultural Statistics Board in Washington, D.C. Also, the change in price level for individual items surveyed are combined to the regional and United States levels, and are published as prices paid indexes referenced to a specific base period. Prices paid indexes for new autos and trucks, building materials, farm supplies, motor supplies, and marketing containers are updated based on price changes measured in selected Bureau of Labor Statistics (BLS) indexes.

Revisions: Any revisions are published in the monthly and in annual issues of Agricultural Prices. The basis for revision must be supported by additional data that directly affect the level of the estimate. More revisions are likely for March when separate prices paid surveys are conducted, in lieu of BLS indexes, by the USDA to measure price change.

Reliability: Current methods of summarization for the March data are not designed directly to calculate sampling errors. However, analytical measures approximate the United States relative sampling errors for major items around 10 percent. Any nonsampling errors are attributed to such things as the inability to obtain correct information, differences in interpreting questions or definitions, mistakes in coding or processing the data, etc. Efforts are made at each step in the survey process to minimize these nonsampling errors.

Program change: Effective January 1, 1995, the National Agricultural Statistics Service updated the weights and changed the construction of its prices paid and received by farmers indexes. A Federal Register Notice dated October 28, 1994 discussed these program modifications.

A 1990-1992 reference and base period replaced the 1977 reference and 1971-1973 base weight period. Five-year moving average weights replaced the current fixed 1971-1973 base period weights. The 1910-1914=100 price indexes, required by statute for computing parity prices, were linked forward based on the changes in the new 1990-1992=100 indexes. The new indexes were constructed by multiplying the ratios of the current prices to the base period prices by the moving average weights (adjusted for seasonal marketing patterns for the prices received indexes).
