CAPACITY OF REFRIGERATED WAREHOUSES
IN THE UNITED STATES
OCTOBER 1, 1967

Capacity of U. S. refrigerated storage totaled 1,294 million cubic feet on October 1, 1967 -- largest of record, according to the Crop Reporting Board. This is the 24th in a biennial series of surveys.

Total gross storage capacity increased 91 million cubic feet in 2 years, and the number of refrigerated plants increased from 3,336 to 3,459. All regions showed increased storage capacity from October 1, 1965.

Greatest gain was in the Pacific region, where capacity totaled 382 million gross cubic feet, 36 million more than on October 1, 1965.

Capacities and increases in other regions were as follows: West North Central - capacity 139 million gross cubic feet, up 13 million; South Atlantic - capacity 186 million, up 12 million; New England region - 66 million, up 8 million; East North Central - 192 million, up 6 million; Mountain - 37 million gross cubic feet, up 5 million; Middle Atlantic - 194 million, up 4 million; East South Central - 34 million, up 4 million; and West South Central - 59 million gross cubic feet, up 3 million.

Although the 1967 capacities in each of the nine regions were larger than in 1965, all States did not share in the gain. Decreased capacities were recorded for Pennsylvania, Ohio, Illinois, Nebraska, North and South Dakota, Maryland, Virginia and West Virginia, Louisiana, Oklahoma, Colorado, and Utah and Nevada. Either no changes or increases were reported for all other States. Largest increase among States was in Washington, up 22 million gross cubic feet; followed by Florida up 11 million.

Public warehouses: Warehouse space maintained for public use continued an uptrend, unbroken since the first survey in 1921. Public warehouses totaled 817 on October 1, 1967 and their capacity totaled 701 million gross cubic feet, a gain of only two plants, but an increase of 53 million cubic feet since the 1965 survey.

Over half the total gain in public warehouse space occurred in the Pacific and West North Central regions -- 18 million cubic feet in the Pacific region; 13 million in the West North Central. Greatest gain in the Pacific region was California's increase of 10 million cubic feet. In the West North Central region, Kansas led with a gain of 8 million cubic feet.

New England advanced 8 million cubic feet, while the South Atlantic and Mountain regions each had gains of 5 million cubic feet. Only the Middle Atlantic region had less public storage capacity in 1967 than in 1965.

All States had at least one public warehouse. California had the most -- with 92 plants, totaling 85 million cubic feet of space. New York was second with 57 million and Illinois, third with 51 million cubic feet.

Private and semiprivate warehouses: A gain of 22 million cubic feet brought the private and semiprivate storage capacity to 277 million cubic feet, 9 percent more than October 1, 1965. Plant numbers, however, decreased to 760, a drop of 22.

Gross storage capacity advanced in the 2-year period in seven of the nine regions. Over 8 million cubic feet was added in the Pacific region (principally in Washington); 7 million in the South Atlantic (mostly in Florida); and 3 million in the Middle Atlantic (mainly in New York).

About one-third of private and semiprivate capacity was in the three Pacific Coast States; one-fourth in the South Atlantic; and 13 percent in the Middle Atlantic region.

Meatpacking plants: Storage space in meatpacking plants declined to 42 million cubic feet by October 1, 1967, a net loss of 4 million during the 2 years. This industry's storage capacity continues to decline substantially. In 1945 capacity was 135 million cubic feet, and by 1955 it was down to 69 million.

Apple houses: Over 274 million cubic feet of storage space was maintained for apples and other fruit on October 1, 1967, a gain of 8 percent from the previous survey year. Substantial growth was reported in the Middle Atlantic, East North Central and Pacific regions -- traditional storage centers for fresh fruit. Washington, Michigan, New York, Oregon, Pennsylvania and Virginia are the leading States in cold storage capacity for apples.

Controlled atmosphere (CA) capacity was equivalent to over 17 million bushels, compared with 15 million in 1965. Washington had about one-third of the total; New York, one-fifth; and Michigan, about one-sixth.

Freezer capacity: Freezer capacity (0°F or below) totaled 716 million cubic feet, 11 percent above 1965. Freezer capacity has increased with each survey since 1945. Gains occurred in all nine regions, with little change in the national distribution of space since 1965. West Coast capacity continued its lead with 171 million cubic feet, the South Atlantic followed with 106 million, and the West North Central, third, had 101 million cubic feet.

On October 1, 1967, almost half the total freezer space was in seven States, as follows: California, Florida, Washington, New York, Oregon, Kansas and Illinois.

Cooler capacity: On October 1, 1967, cooler space (above 0° to 50°F) in all types of warehouses totaled 579 million cubic feet, up 22 million from 1965. Forty-seven percent of this space was classified as fruit storage space and nearly all of it was for private use. Public general warehouses had 31 percent of the total cooler capacity.

Plants in the Pacific States accounted for 36 percent of all cooler space, the largest, regionally, in Washington's major apple-producing areas. Capacity in the Middle Atlantic and East North Central States was about evenly divided -- 17 percent each. Private and semiprivate fruit houses accounted for 22 million cubic feet of the capacity gain in cooler space since 1965. Cooler space in public fruit houses declined 2 million, while cooler space in meat packing plants declined 3 million cubic feet.

Cooler rooms equalled 45 percent of the national refrigerated capacity in 1967. This compares with 46 percent in 1965; 54 percent in 1955; and 79 percent in 1945. These percentages show changes resulting from growth and expansion of frozen food production, indicating wider consumer acceptance of frozen food products.

Cities: U. S. cities with 3 or more warehouses and at least 3 million cubic feet totaled 45, according to the 1967 survey. These cities had 899 plants with a capacity of 546 million cubic feet. This was 26 percent of the U. S. total plants, and 42 percent of the gross capacity.

Chicago and Kansas City, each having 48 million gross cubic feet, were by far the leading locations for the storage industry. Los Angeles - Long Beach had 28 million cubic feet; Rochester, 27; and New York, 24 million cubic feet; completing the list of the five cities leading in refrigerated capacity. These locations were also the prime centers for public general warehouses.

Forty-eight cities had 3 or more public warehouses and at least 2 million cubic feet of usable piling space, more than half, east of the Mississippi River. Their combined capacity of 178 million cubic feet of usable piling space was 18 percent of U. S. storage space, and 34 percent of all the public general capacity.

Definitions: The terms used in this report are defined as follows:

Warehouses: Facilities having refrigerated space artificially cooled to temperatures of 50°F. or lower holding food stocks for 30 days or more. Space in warehouses operated by wholesalers, jobbers, retailers, or other businesses holding food products less than 30 days are not included. Excluded, too, was refrigerated space in locker plants, hotels, and military establishments.

To insure reliable capacity coverage, effort was made to include space in all known public, private, and semiprivate refrigerated facilities. These facilities included one-product houses handling fish, fruits, vegetables, meats, or dairy and refrigerated rooms maintained by frozen food processors for storage purposes.

Public warehouses: Any artificially cooled warehouse operated to store food commodities for others for pay.

Private warehouses: Any artificially cooled warehouse operated as a warehousing business to facilitate the main function of a producer, processor, or distributor, but not to store commodities for others for pay.

Semiprivate warehouses: Any artificially cooled warehouse used partly to store the owner's commodities and, in addition, to store various food commodities for others for pay.

Meatpacking establishment: Any plant engaged in processing dressed animal products for food. For this report and survey, only the space used for storing products is included. Refrigerated working space, chill rooms, and coolers used exclusively for handling dressed carcasses prior to shipping, as well as smoking and curing rooms are excluded.

Apple house: Any artificially cooled warehouse -- public, private, or semi-private -- operated mainly or exclusively to store apples or pears.

Gross space: Space inside refrigerated rooms, measured from wall to wall and floor to ceiling, excluding elevators, stairs, vestibules, and like enclosures.

Usable piling space: Space for storing commodities, that is, space inside rooms measured wall to wall and floor to ceiling, minus the space provided for ventilation (outside of pile), space occupied by coils, aisles, posts, sprinklers, and the like.

Number of plants: The number of individual plant locations. Company plants of different address within a city or State, and plants having different intra-company designations are counted separately.

Cities: Standard metropolitan statistical areas as defined by the Bureau of the Budget, 1964. Generally, they are areas with at least one city with 50,000 or more population and will include the entire county of the central city and adjacent counties that are metropolitan in character and economically and socially integrated with the county of the central city.

Geographic regions: The regions and States covered in the survey are as follows:

New England: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut.

Middle Atlantic: New York, New Jersey, and Pennsylvania.

East North Central: Ohio, Indiana, Illinois, Michigan, and Wisconsin.

West North Central: Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas.

South Atlantic: Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida.

East South Central: Kentucky, Tennessee, Alabama, and Mississippi.

West South Central: Arkansas, Louisiana, Oklahoma, and Texas.

Mountain: Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, and Nevada.

Pacific: Washington, Oregon, and California.
