ALL CATTLE AND CALVES in the United States as of January 1, 1983 totaled 115 million head, down fractionally from the 116 million a year ago but 1 percent above two years ago, according to the Crop Reporting Board. This is the first downward trend in cattle inventories in the last four years.

All cows and heifers that have calved, 49.1 million, were down 2 percent from 50.3 million a year ago.

--Beef cows, at 38.1 million, are 3 percent below January 1, 1982.

--Milk cows, at 11.1 million, are up fractionally from the 11.0 million a year ago and 2 percent from the 10.9 million January 1, 1981.

Other class estimates on January 1, 1983 and the changes from last year and two years ago, respectively, are as follows:

-- All heifers 500 pounds and over, 18.8 million, up 3 percent and 6 percent.

-- Beef replacement heifers, 6.34 million, down 4 percent and up 3 percent.

-- Milk replacement heifers, 4.53 million, unchanged and up 4 percent.

-- Other heifers, 7.95 million, up 11 percent and up 9 percent.

-- Steers weighing 500 pounds and over, 16.2 million, up 5 percent from both years.

-- Bulls weighing 500 pounds and over, 2.62 million, virtually unchanged and up 3 percent.

-- Heifers, steers, and bulls under 500 pounds, 28.4 million, down 2 percent from both years.

-- All cattle and calves on feed January 1, 1983, for slaughter, 12.0 million, up 13 percent and 4 percent.

* The estimates of cattle and calves in this report include those on *
* feed as of January 1, shown on page 9. *

CALF CROP DOWN 1 PERCENT

The 1982 calf crop is estimated at 44.4 million, down 1 percent from both 1981 and 1980. This calf crop is up 2 percent from the expected calf crop published last July. Calves born during the first half of the year were estimated at 70.5 percent of the annual total.

RELIABILITY AND ESTIMATING PROCEDURES

Primary data used in making cattle estimates in this report were obtained from a sample of farmers and ranchers across the U.S. using probability surveys. Information was collected by mail, telephone and personal interview. Since all operations with cattle were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is less than one percent of the total cattle and calves at the national level. This means that chances are approximately 95 out of 100 that the survey estimate will be within two percent of the complete coverage value if the same procedures were used to survey all producers. The sampling variability of estimates for all cows and for the calf crop is slightly larger than that for total inventory.

Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

In setting the inventory estimates, the Crop Reporting Board used survey estimates of inventory numbers, births and deaths. These survey estimates were combined with reliable check data from other sources on slaughter, imports and exports to construct a national balance sheet (on page 3), which provides an additional check on survey inventory estimates.
