CROP VALUES

Season Average Prices and Value of Production, by States, 1973, 1974, and 1975

Estimated season average prices and value of production for all major farm crops and for many minor crops are presented in this report. The season average prices are estimates of the average prices received by producers for that part of the crop that is sold. For wheat, rye, oats, and barley, the 1975 price estimates are based on mid-month price levels through November with an allowance for marketings for the remainder of the season. For all other crops 1975 price estimates are based on mid-month price levels through December with an allowance for marketings for the remainder of the season. These prices are applied to the production estimates to compute the value of production for each State. The United States value of production is the sum of the State values.

U. S. average prices are obtained by weighting State prices by estimated State sales for each crop year. These averages may differ from the averages computed by dividing value of production by the quantity produced. The value of production estimates in this report relate to the crop year and should not be confused with cash receipts which relate to sales during a calendar year, irrespective of the year of production. All estimates for the 1975 crop are preliminary.

For crops for which monthly price estimates are prepared, State season average prices are computed by weighting mid-month marketings. For most other crops the season average price is based on special survey data. The season average prices include an allowance for unredeemed CCC loans and purchase agreement deliveries valued at average loan rate, by States, for crops under these programs. Season average prices and values of production including government program payments are shown for corn, all wheat, sorghum for grain, barley and cotton lint. Payments for 1974 consist of disaster relief for prevented planting and low yield only. Data for 1975 are not available for this publication.

1/ THE VALUE OF PRODUCTION FOR ALL POTATOES IS THE SUM OF THE VALUE OF PRODUCTION OF THE SEASONAL GROUPS. FOR STATES HAVING TWO OR MORE SEASONAL GROUPS THE STATE AVERAGE IS DERIVED BY DIVIDING VALUE OF SALES BY TOTAL SALES AND MAY NOT GIVE THE SAME AVERAGE AS DIVIDING TOTAL VALUE OF PRODUCTION BY TOTAL PRODUCTION.

1/ VALUE OF PRODUCTION FOR 1975 WAS DERIVED USING 1974 CROP SEASON AVERAGE PRICES SINCE SALES DATA FOR THE 1975 CROP ARE INSUFFICIENT FOR ESTIMATING A 1975 SEASON AVERAGE PRICE. 2/ SUFFICIENT SALES DATA WERE AVAILABLE TO ESTIMATE A SEASON AVERAGE PRICE FOR MOST OF THE STATES' 1975 PRODUCTION, BUT 1974 SEASON AVERAGE PRICES WERE USED FOR SOME TYPES IN CALCULATING AN AVERAGE PRICE AND VALUE OF PRODUCTION.
