CROP VALUES

Season Average Prices and Value of Production, by States, 1974, 1975, and 1976

Estimated season average prices and value of production for all major farm crops and for many minor crops are presented in this report. The season average prices are estimates of the average prices received by producers for that part of the crop that is sold. For all crops 1976 season average price estimates are based on mid-month price levels through December with an allowance for marketings for the remainder of the season. These prices are applied to the production estimates to compute the value of production for each State. The United States value of production is the sum of the State values.

U. S. average prices are obtained by weighting State prices by estimated State sales for each crop year. These averages may differ from the averages computed by dividing value of production by the quantity produced. The value of production estimates in this report relate to the crop year and should not be confused with cash receipts which relate to sales during a calendar year, irrespective of the year of production. All estimates for the 1976 crop are preliminary.

For crops for which monthly price estimates are prepared, State season average prices are computed by weighting mid-month prices by estimated monthly marketings. For most other crops the season average price is based on special survey data. Season average prices include an allowance for unredeemed CCC loans and purchase agreement deliveries valued at average loan rate, by States, for crops under these programs.

2/ VALUE OF PRODUCTION FOR 1976 WAS DERIVED USING 1975 CROP SEASON AVERAGE PRICES SINCE SALES DATA FOR THE 1976 CROP ARE INSUFFICIENT FOR ESTIMATING A 1976 SEASON AVERAGE PRICE.
