LIQUID, FROZEN AND DRIED EGG PRODUCTION
September 1947

Production of liquid egg during September totaled 10,255,000 pounds, 43 percent less than the 17,991,000 pounds produced in September last year, the Bureau of Agricultural Economics reports. Egg drying operations during the month were on a relatively small scale, but freezing operations were the second largest of record for September. The quantity of liquid egg frozen during the month was exceeded only by the 17,500,000 pounds frozen in September 1944.

Dried egg production during September totaled only 158,000 pounds, compared with 4,735,000 pounds in September last year. Production consisted of 66,000 pounds of whole egg, 89,000 pounds of albumen and 3,000 pounds of dried yolk. At present, egg drying operations are practically on a pre-war level.

The production of 9,163,000 pounds of frozen eggs was over three times as large as the September production last year. Production from January through September totaled 353,408,000 pounds, compared with 384,433,000 pounds in the same period last year, a decrease of 8 percent.

Storage stocks of frozen eggs on October 1 totaled 216,520,000 pounds, compared with 207,244,000 pounds on October 1, 1946 and with the October 1 (1942-46) average of 256,816,000 pounds.
