A total of 50.1 million dozen shell eggs were broken July 20 through August 16, 1975 under the USDA's Egg Products Inspection Act—down 8 percent from the corresponding four weeks of last year. Percentage decreases by regions from last year were: South Atlantic, 15; North Atlantic, 14; North Central, 7; South Central, 5; and Western 1.

During the four weeks, 72 million pounds of liquid egg products were used in processing—down 7 percent from the same period last year. Ingredients added in processing totaled 2.6 million pounds, 1 percent more than a year ago.

Liquid egg production (including ingredients added) for immediate consumption and processing totaled 27.4 million pounds during the 4-week period, 11 percent above the same period last year. Products for immediate consumption totaled 14.7 million pounds, compared with 11.6 million a year earlier. Those for processing totaled 12.8 million pounds, compared with 13.2 million last year.

Frozen egg products amounted to 26.1 million pounds, 19 percent less than last year. Dried egg production was 5.1 million pounds, 9 percent below the 4-week period a year ago.

Cumulative totals July 1 through August 16, 1975 and percentage decreases from the corresponding 1974 period are as follows: Shell eggs broken—86 million dozen, 9 percent; liquid egg used in processing—124 million pounds, 10 percent; frozen products—47 million pounds, 16 percent; and dried products at 9 million pounds, 13 percent. The cumulative total for immediate consumption and processing at 45 million pounds was up 2 percent from the same period last year.
