ON-FARM GRAIN STORAGE CAPACITY

The United States on-farm grain storage capacity totaled 12.4 billion bushels on December 1, 1990, 3 percent below a year ago.

The National Agricultural Statistics Service collects on-farm grain storage capacity data as part of the Agency's quarterly Agricultural Surveys. The capacity data from the December Agricultural Survey are published annually for selected States, and the United States, excluding Alaska and Hawaii. The data provide an indication of farm storage capacity with a range indicated by the sampling error. The measure of sampling error is expressed as a percent of the survey indications, (coefficient of variation). When comparing the data from year to year, this survey variability must be taken into account.

Approximately 82,000 reports were included in the survey. At the U.S. level, the on-farm storage capacity indication of 12.4 billion bushels has a sampling error of 1.3 percent. This means that chances are 2 out of 3 that if the storage capacity indications from all possible samples were averaged together the results would be within plus or minus 1.3 percent of 12.4 billion bushels.
