

Grain Stocks

United States
Department of
Agriculture

Washington, D.C.

Released March 31, 1992, by the Agricultural Statistics Board. Estimates refer to March 1, 1992.

Corn stocks in all positions on March 1, 1992, totaled 4.56 billion bushels, 5 percent below a year earlier. Of the total stocks, 2.61 billion bushels are stored on farms, 15 percent less than last year. Off-farm stocks, at 1.95 billion bushels, are up 13 percent from last year.

The December-February 1992 indicated disappearance is 1.98 billion bushels, 8 percent below the disappearance of 2.15 billion bushels during the same period a year earlier.

All wheat stored in all positions on March 1, 1992, totaled 886 million bushels, down 37 percent from March 1, 1991. This is the lowest March 1 stocks on record. Farm stocks are 276 million bushels, off 48 percent from last March 1. Off-farm stocks total 610 million bushels, down 29 percent from March 1991. The indicated third quarter disappearance is 558 million bushels, up 9 percent from the same period a year ago.

Durum wheat stocks in all positions on March 1, 1992, are 79.3 million bushels, down 4 percent from last March 1. Farm stocks, at 56.3 million bushels, are also down 4 percent. Off-farm stocks are 23.1 million bushels, down 3 percent from March 1991. Disappearance from all positions for the quarter ending March 1 is 22.2 million bushels, off 25 percent from the same quarter last year.

Index is located at the end of this report. For information call (202) 720-2127. Office hours are 8:00 a.m. to 4:30 p.m. ET.

Gr Lg 11-1 (3-92)

Soybeans stored in all positions on March 1, 1992, totaled 1.18 billion bushels, 1 percent below holdings a year earlier. On-farm stocks, at 505 million bushels, were 9 percent below last March and accounted for 43 percent of the March 1, 1992, holdings. Off-farm stocks totaled 672 million bushels, 6 percent above last March.

Indicated disappearance for the December 1991-February 1992 quarter totaled 602 million bushels, 22 percent above the comparable period a year earlier. Disappearance during the first two quarters of the 1991-92 marketing year totaled 1.14 billion bushels, 17 percent above the previous year.

Barley stored in all positions on March 1, 1992, totaled 219 million bushels, 4 percent above the stocks of March 1, 1991. Of the total barley stocks on-hand, 102 million bushels were stored on farms, 8 percent above a year earlier. Off-farm stocks at 117 million bushels were virtually the same as last year. Indicated disappearance during the December-February quarter totaled 110 million bushels, 16 percent above the same period a year earlier.

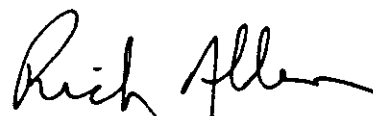

Oats stored in all positions on March 1, 1992, totaled 174 million bushels, 24 percent below March 1, 1991. Of the total oat stocks on-hand, 98.2 million bushels are stored on farms, 29 percent below last year. Off-farm stocks totaled 75.7 million bushels, 16 percent below a year earlier. The indicated December-February disappearance from all positions is 70.8 million bushels, up 9 percent from a year ago.

Sorghum in all storage positions March 1, 1992, totaled 251 million bushels, down 25 percent from March 1, 1991. Of the total stocks on-hand, 196 million bushels were stored off farms. This total is 24 percent less than last March 1. The indicated disappearance for the quarter ending March 1, 1992, is 199 million bushels, up 11 percent from the same time frame in 1991.

This report was approved on March 31, 1992, by the Secretary of Agriculture and the National Agricultural Statistics Service's Agricultural Statistics Board.

Secretary of
Agriculture
Edward R. Madigan

Agricultural Statistics Board
Chairperson
Rich Allen

* Included in unallocated "off farms" to avoid disclosure of individual operations; in unallocated "on farms", minor States not published separately are included. 1/ Revised. 2/ Includes stocks at mills, elevators, warehouses, terminals, and processors.

Reliability of March 1, 1992, Grain Stocks Estimates

Survey Procedures: The grain stocks estimates in this report are based on surveys conducted during the first two weeks of March. Separate surveys were conducted to obtain the on-farm and off-farm estimates. The on-farm stocks survey included about 70,000 operators selected in a manner that ensures that all operations in the U.S. had a chance to be selected. These producers were asked to provide the total quantities of grain on their operations as of March 1, 1992. This included all whole grains and oilseeds stored whether for feed, seed, or sale as well as any stored under a Government program.

The off-farm stocks survey is an enumeration of all known commercial grain storage facilities. This includes approximately 13,000 facilities with about 9 billion bushels of storage capacity. An effort is made to obtain a report from every facility. Reports of stock holdings are normally received from operations covering about 90 percent of the capacity. Estimates are made for missing facilities to make the survey complete.

Estimation Procedures: On-farm and off-farm survey data are reviewed at the State and national levels for reasonableness, consistency with historical estimates, and current crop size. After estimates are made for on-farm and off-farm stock inventories, the total of these two are combined and evaluated using the balance sheet approach. This method utilizes other sources of data to measure the reasonableness of the stocks estimates. Estimates of production, imports, exports, crushings, milling, and all other recorded uses of grain and oilseeds are reviewed to make sure beginning stocks, production and utilization, and ending stocks are within reasonable balance and present the best possible estimate of stocks.

Revision Policy: On-farm and off-farm stocks are subject to revision the quarter following initial publication and again in the following December 1 Grain Stocks report published in January each year. Revisions can be made when late reports are received, errors are detected in reporting and calculating, and production estimates are revised. Estimates will also be reviewed after data for the 5-year Census of Agriculture, conducted by the Department of Commerce, are available. No revisions will be made after that date.

Reliability: Reliability of the on-farm and off-farm stocks must be treated separately because the survey design for the two surveys are drastically different. The on-farm stocks estimates are subject to sampling variability because all operations holding on-farm stocks are not included in the sample. This variability, as measured by the relative standard error at the U.S. level, is approximately 1.7 percent for corn, 2.1 percent for soybeans, and 2.7 percent for all wheat. This means that chances are approximately 95 out of 100 that survey estimates for stocks will be within plus or minus 3.4 percent for corn, 4.2 percent for soybeans, and 5.4 percent for all wheat of the value that could be developed by averaging the estimates produced from all possible samples selected from the same population and surveyed using the same procedures. The relative standard errors of the

estimates for sorghum, barley, and oats are 4.6, 3.8, and 3.0, respectively. Sampling errors cannot be applied directly to the on-farm stocks published in this report to determine confidence intervals since the Agricultural Statistics Board estimates represent a composite of information such as the balance sheet components.

Survey estimates are also subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. Off-farm, as well as on-farm stocks, are subject to these types of errors. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The next "Grain Stocks" report will be released at 3:00 p.m. ET on June 30, 1992.
