

Grain Stocks

United States
Department of
Agriculture

Washington, D.C.

Released June 30, 1995, by the Agricultural Statistics Board. Estimates refer to June 1, 1995.

Corn Stocks Up 45 Percent

Corn stocks in all positions on June 1, 1995, totaled 3.42 billion bushels, 45 percent above a year earlier. Of the total stocks, 2.07 billion bushels are stored on farms, 72 percent more than last year. Off-farm stocks, at 1.34 billion bushels, are up 16 percent from last year.

The March-May 1995 indicated disappearance is 2.18 billion bushels, 33 percent above the disappearance of 1.64 billion bushels during the same period a year earlier.

Old crop all wheat stocks on June 1, 1995 are estimated at 510 million bushels, down 10 percent from June 1, 1994. Farm stocks are 168 million bushels, down 4 percent from a year ago. Off-farm stocks totaled 342 million bushels, down 13 percent from last year. The fourth quarter all wheat disappearance is 459 million bushels, down slightly from the same quarter in 1994.

Soybeans stored in all positions on June 1, 1995, totaled 792 million bushels, 43 percent above holdings a year ago and 16 percent above the stocks of June 1, 1993. On-farm stocks are estimated at 349 million bushels, 79 percent above last June and account for 44 percent of the total stocks on hand. Off-farm holdings, at 443 million bushels, are 23 percent above June 1, 1994.

Indicated disappearance during the March-May quarter, at 578 million bushels, compares with 466 million bushels for the same period last year. September-May disappearance is 23 percent above the 1993-1994 comparable disappearance.

At the time of the survey only 52 percent of the soybeans were planted. This compares to a five-year average of 74 percent. Therefore, the amount of seed utilized in the balance sheet was lower than average.

Barley stored in all positions on June 1, 1995, totaled 113 million bushels, 19 percent below the stocks of June 1, 1994. Of the total barley stocks on hand, 37.9 million bushels were stored on farms, 41 percent below a year earlier. Off-farm stocks, at 74.7 million bushels were slightly below last year. Indicated disappearance during the March-May quarter totaled 80.4 million bushels, 6 percent below the same period a year earlier.

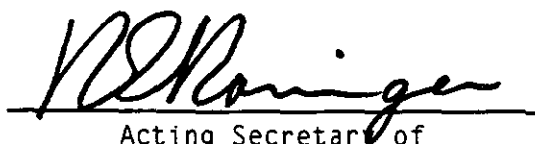

Index is located at the end of this report. For information call (202) 720-2127. Office hours are 8:00 a.m. to 4:30 p.m. ET.

Oats stored in all positions on June 1, 1995, totaled 101 million bushels, 5 percent below the stocks of June 1, 1994. Of the total oat stocks on hand, 46.8 million bushels were stored on farms, 13 percent below last year. Off-farm stocks totaled 53.8 million bushels, 4 percent above a year earlier. The indicated March-May disappearance from all positions is 48.4 million bushels, 18 percent above the same period a year earlier.

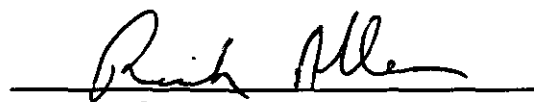

Old crop durum wheat stocks on June 1, 1995 are 26.2 million bushels, down 6 percent from last June 1. These are the lowest June 1 stocks on record. Disappearance for the quarter is 16.8 million bushels, up 23 percent from the same period last year.

Grain sorghum in all storage positions on June 1, 1995 totaled 158 million bushels, up 23 percent from last June 1. Off-farm stocks are 113 million bushels; farm stocks, 44.6 million. These are up 18 and 39 percent respectively from a year ago. Disappearance for the quarter is 123 million bushels, down 17 percent from March-May 1994.

This report was approved on June 30, 1995, by the Acting Secretary of Agriculture and the National Agricultural Statistics Service's Agricultural Statistics Board.

Acting Secretary of
Agriculture
Richard E. Rominger

Agricultural Statistics Board
Chairperson
Rich Allen

* "Off farms unallocated" includes State data not published to avoid disclosure of individual operations; "on farms unallocated" includes minor producing States' data not published separately.

1/ Revised.

2/ Includes stocks at mills, elevators, warehouses, terminals, and processors.

Reliability of June 1, 1995, Grain Stocks Estimates

Survey Procedures: The grain stocks estimates in this report are based on surveys conducted during the first two weeks of June. Separate surveys were conducted to obtain the on-farm and off-farm estimates. The on-farm stocks survey included about 70,000 operators selected in a manner that ensures that all operations in the U.S. had a chance to be selected. These producers were asked to provide the total quantities of grain on their operations as of June 1, 1995. This included all whole grains and oilseeds stored whether for feed, seed, or sale as well as any stored under a Government program.

The off-farm stocks survey is an enumeration of all known commercial grain storage facilities. This includes nearly 12,000 facilities with about 8.50 billion bushels of storage capacity. An effort is made to obtain a report from every facility. Reports of stock holdings are normally received from operations covering about 90 percent of the capacity. Estimates are made for missing facilities to make the survey complete.

Estimation Procedures: On-farm and off-farm survey data are reviewed at the State and national levels for reasonableness, consistency with historical estimates, and current crop size. After estimates are made for on-farm and off-farm stock inventories, the total of these two are combined and evaluated using the balance sheet approach. This method utilizes other sources of data to measure the reasonableness of the stocks estimates. Estimates of production, imports, exports, crushings, milling, and all other recorded uses of grain and oilseeds are reviewed to make sure beginning stocks, production and utilization, and ending stocks are within reasonable balance and present the best possible estimate of stocks.

Revision Policy: On-farm and off-farm stocks are subject to revision the quarter following initial publication and again in the following December 1 "Grain Stocks" report published in January each year. Revisions can be made when late reports are received, errors are detected in reporting and calculating, and production estimates are revised. Estimates will also be reviewed after data for the 5-year Census of Agriculture, conducted by the Department of Commerce, are available. No revisions will be made after that date.

Reliability: Reliability of the on-farm and off-farm stocks must be treated separately because the survey design for the two surveys is drastically different. The on-farm stocks estimates are subject to sampling variability because all operations holding on-farm stocks are not included in the sample. This variability, as measured by the relative standard error at the U.S. level, is approximately 1.4 percent for corn, 2.4 percent for soybeans, and 3.0 percent for all wheat. This means that chances are approximately 95 out of 100 that survey estimates for stocks will be within plus or minus 2.8 percent for corn, 4.8 percent for soybeans, and 6.0 percent for all wheat of the value that could be developed by averaging the estimates produced from all possible samples selected from the same population and surveyed using the same procedures. The relative standard errors of the

estimates for sorghum, barley, and oats are 6.5, 5.3, and 3.4, respectively. Sampling errors cannot be applied directly to the on-farm stocks published in this report to determine confidence intervals since the Agricultural Statistics Board estimates represent a composite of information such as the balance sheet components.

Survey estimates are also subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. Off-farm, as well as on-farm stocks, are subject to these types of errors. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.
