**Old crop corn** stocks in all positions on September 1, 2001 totaled 1.90 billion bushels, up 11 percent from September 1, 2000 and the highest level since September 1993. Of the total stocks, 753 million bushels are stored on farms, down 5 percent from a year earlier. Off-farm stocks, at 1.15 billion bushels, are up 24 percent from the previous year. The June - August 2001 indicated disappearance is 2.03 billion bushels, compared with 1.87 billion bushels during the same period last year.

**Old crop soybeans** stored in all positions on September 1, 2001 totaled 248 million bushels, down 15 percent from September 1, 2000. On-farm stocks totaled 83.5 million bushels, down 26 percent from a year ago. Off-farm stocks, at 164 million bushels, were down 7 percent from a year ago. The 2000 soybean production was revised to 2.76 billion bushels, down 11.9 million bushels from the previous estimate. Acreage planted and harvested was decreased by 230,000 and 310,000 acres to 74.3 and 72.4 million acres, respectively. The 2000 yield, at 38.1 bushels per acre, was unchanged from the previous estimate. A State table with the revised acreage, yield, and production estimates is included on page 17. Revisions were made based upon an analysis of end-of-marketing year stock estimates, disappearance data for exports and crushings, and farm program administrative data.

**All wheat** stored in all positions on September 1, 2001 totaled 2.16 billion bushels, down 8 percent from a year ago. On-farm stocks are estimated at 697 million bushels, down 14 percent from last year. Off-farm stocks, at 1.46 billion bushels, are down 6 percent from a year ago. **Oats** stored in all positions on September 1, 2001 totaled 116 million bushels, 23 percent below the stocks on September 1, 2000. Of the total stocks on hand, 74.8 million bushels were stored on farms, 26 percent less than a year ago. Off-farm stocks totaled 40.9 million bushels, 17 percent below a year earlier. Indicated disappearance during June - August 2001 totaled 73.9 million bushels, 2 percent less than the same period a year ago.

**Old crop grain sorghum** stored in all positions on September 1, 2001 totaled 41.8 million bushels, down 36 percent from a year ago. ## Reliability of September 1, 2001 Grain Stocks Estimates

**Survey Procedures:** The grain stocks estimates in this report are based on surveys conducted during the first 2 weeks of September. Separate surveys are conducted to obtain the on-farm and off-farm estimates. The on-farm stocks survey is a probability survey that includes more than 54,000 operators selected from a list of producers that ensures all operations in the U.S. have a chance to be selected. These producers are asked to provide the total quantities of grain stored on their operations as of September 1, 2001. This includes all whole grains and oilseeds stored whether for feed, seed, or sale as well as any stored under a Government program.

The off-farm stocks survey is an enumeration of all known commercial grain storage facilities. This includes approximately 9,800 facilities with about 8.34 billion bushels of storage capacity. An effort is made to obtain a report from all facilities. Reports of stock holdings are normally received from operations covering about 90 percent of the capacity. Estimates are made for missing facilities to make the survey complete.

**Estimation Procedures:** On-farm and off-farm survey data are reviewed at the State and national levels for reasonableness, consistency with historical estimates, and current crop size. After estimates are made for on-farm and off-farm, the totals of these two are combined and evaluated using the balance sheet approach. This method utilizes other sources of data to check the reasonableness of the stocks estimates. Estimates of production, imports, exports, crushings, milling, and all other recorded uses of grain and oilseeds are reviewed to make sure beginning stocks, production, utilization, and ending stocks are within reasonable balance and present the best possible estimate of stocks.

**Revision Policy:** On-farm and off-farm stocks are subject to revision the quarter following initial publication and again in the following December 1 "Grain Stocks" report published in January each year. Revisions can be made when late reports are received, errors are detected in reporting and calculations, and production estimates are revised. Estimates will also be reviewed following the 5-year Census of Agriculture. No revisions to these years will be made after that date.

**Reliability:** Reliability of the on-farm and off-farm stocks must be treated separately because the survey designs for the two surveys are drastically different. The on-farm stocks estimates are subject to sampling variability because all operations holding on-farm stocks are not included in the sample. This variability, as measured by the relative standard error at the U.S. level, is approximately 3.4 percent for corn, 6.6 percent for soybeans, and 2.4 percent for all wheat. This means that chances are approximately 95 out of 100 that survey estimates for stocks will be within plus or minus 6.8 percent for corn, 13.2 percent for soybeans, and 4.8 percent for all wheat of the value that could be developed by averaging the estimates produced from all possible samples selected from the same population and surveyed using the same procedures.

The relative standard errors for sorghum, barley, and oats are 13.5, 4.0, and 4.5 percent, respectively. Sampling errors cannot be applied directly to the on-farm stocks published in this report to determine confidence intervals since the Agricultural Statistics Board estimates represent a composite of information from more than a single source.

Survey indications are also subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. Off-farm, as well as on-farm stocks, are subject to these types of errors. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.
