On-Farm Grain Storage Capacity Up Slightly From Last Year

The United States on-farm storage capacity totaled 11.2 billion bushels on December 1, 2002, up slightly from December 1, 2001. Iowa leads all States in on-farm storage capacity with 1.65 billion bushels followed by Minnesota with 1.25 billion bushels; Illinois, 1.23 billion bushels; Nebraska, 970 million bushels; and North Dakota with 700 million bushels. The top five States account for 52 percent of the Nation's on-farm storage capacity. On-farm grain storage capacity includes all bins, cribs, sheds, and other structures normally used to store whole grains or oilseeds located on farms.

Off-Farm Grain Storage Capacity and Facilities

Capacity of off-farm commercial grain storage totaled 8.51 billion bushels in the United States on December 1, 2002, up 1 percent from December 1, 2001. Twenty three States showed increases from a year earlier, 12 States and New England recorded decreases in capacity, and five States were unchanged. States showing increases included Iowa, 30.0 million bushels; Texas, 20.0 million bushels; South Dakota, 11.0 million bushels; Wisconsin, 9.96 million bushels; and Illinois, 8.30 million bushels. Capacity was taken off line in Colorado where 7.45 million bushels were dropped during 2002 and in Idaho where 5.80 million bushels were lost.

Illinois continued to lead all States in off-farm storage capacity, followed by Iowa, Kansas, Nebraska, and Texas. The top five States accounted for 52 percent of the Nation's off-farm storage capacity on December 1, 2002.

Off-farm grain storage capacity includes all elevators, warehouses, terminals, merchant mills, other storage, and oilseed crushers which store grains, soybeans, sunflowers, or flaxseed. Capacity data excludes warehouses used to store only rice or peanuts, oilseed crushers processing only cottonseed or peanuts, tobacco warehouses, seed warehouses, and storages that handle only dry edible beans.

Off-farm storage facilities totaled 9,521 on December 1, 2002, down 2 percent from December 1, 2001. States with the largest number of facilities are Illinois with 980; Kansas, 799; Minnesota, 611; Nebraska, 508; and Texas with 500.

Reliability of December 1, 2002 Grain Stocks Estimates

Survey Procedures: The grain stocks estimates in this report are based on surveys conducted during the first 2 weeks of December. Separate surveys are conducted to obtain the on-farm and off-farm estimates. The on-farm stocks survey is a probability survey that includes more than 70,000 operators selected from a list of producers that ensures all operations in the U.S. have a chance to be selected. These producers are asked to provide the total quantities of grain stored on their operations as of December 1, 2002. This includes all whole grains and oilseeds stored whether for feed, seed, or sale as well as any stored under a Government program.

The off-farm stocks survey is an enumeration of all known commercial grain storage facilities. This includes approximately 9,500 facilities with about 8.51 billion bushels of storage capacity. An effort is made to obtain a report from all facilities. Reports of stock holdings are normally received from operations covering about 90 percent of the capacity. Estimates are made for missing facilities to make the survey complete.

Estimation Procedures: On-farm and off-farm survey data are reviewed at the State and national levels for reasonableness, consistency with historical estimates, and current crop size. After estimates are made for on-farm and off-farm stocks, the totals of these two are combined and evaluated using the balance sheet approach. This method utilizes other sources of data to check the reasonableness of the stocks estimates. Estimates of production, imports, exports, crushings, milling, and all other recorded uses of grain and oilseeds are reviewed to make sure beginning stocks, production, utilization, and ending stocks are within reasonable balance and present the best possible estimate of stocks.

Revision Policy: On-farm and off-farm stocks are subject to revision the quarter following initial publication and again in the following December 1 "**Grain Stocks**" report published in January each year. Revisions can be made when late reports are received, errors are detected in reporting and calculations, and production estimates are revised. Estimates will also be reviewed following the 5-year Census of Agriculture. No revisions to these years will be made after that date.

Reliability: Reliability of the on-farm and off-farm stocks must be treated separately because the survey designs for the two surveys are drastically different. The on-farm stocks estimates are subject to sampling variability because all operations holding on-farm stocks are not included in the sample. This variability, as measured by the relative standard error at the U.S. level, is approximately 1.8 percent for corn, 2.2 percent for soybeans, and 2.7 percent for all wheat. This means that chances are approximately 95 out of 100 that survey estimates for stocks will be within plus or minus 3.6 percent for corn, 4.4 percent for soybeans, and 5.4 percent for all wheat of the value that could be developed by averaging the estimates produced from all possible samples selected from the same population and surveyed using the same procedures. The relative standard errors for sorghum, barley, and oats are 9.4, 3.4, and 3.2 percent, respectively.

Survey indications are also subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. Off-farm, as well as on-farm stocks, are subject to these types of errors. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

Competing in the 21st Century

Agricultural Outlook Forum 2003

February 20-21, 2003

Crystal Gateway

Marriott Hotel

Arlington, Virginia

**2003 Commodity Prospects
Emerging Export Competitors
Farming under New Programs
Coping with Regulations
Shifting consumer Preferences
Ensuring Food Safety
Impact of El Nino**

Sharpen your strategic focus at USDA's 79th annual Agricultural Outlook Forum. Note experts, industry leaders and producers will discuss many facets of competing in domestic and world markets.

The program will examine growing competition from Central and Eastern Europe, Brazil and Asia, as well as progress in WTO negotiations.

Focus sessions will highlight many challenges producers face in the competitive arena, ranging from the growing complexity and cost of regulation, to dealing with food safety and changing eating habits.

As always, leading analysts will be on hand to debate planting, trade and price prospects for farm commodities for the year ahead. Attendees will receive new 10-year commodity projections from USDA.

Networking opportunities abound at the Forum, which attracted 1,400 attendees last February. Register now for the best value. See full details at www.usda.gov/oce.
