

HOGS AND PIGS

Statistical Reporting
Service

U.S. Department
of Agriculture

Washington, D.C.
20250

Released:

June 23, 1977
3:00 P.M. ET

In this Issue:

- * Inventories
- * Sows Farrowing
- * Pig Crop

INVENTORY NEARLY UNCHANGED: Inventory of hogs and pigs on June 1, 1977 in the U.S. is estimated at 54.1 million head, up fractionally from last year but 12 percent above two years earlier, according to the Crop Reporting Board.

- Breeding inventory, at 8.6 million, is up 2 percent from 1976 and up 16 percent from 1975.
- Market hogs inventory, at 45.5 million head, is down slightly from 1976 but 12 percent above 1975.

The 14 Quarterly States accounted for 85 percent of the U.S. inventory with 46.1 million head, slightly above 1976 and 13 percent above 2 years earlier.

PIG CROP (DECEMBER 1976 - MAY 1977): The December 1976 - May 1977 U.S. pig crop was 43.1 million head, 2 percent more than last year and 21 percent above the same period two years ago.

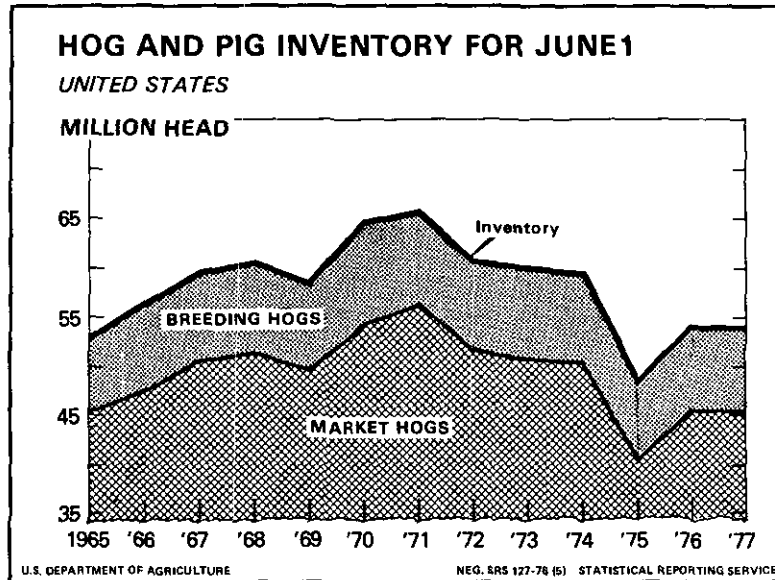

A total of 6.1 million sows farrowed during this period -- 5 percent more than a year earlier. This period's litter size at 7.11 pigs was the lowest since 1974 and compares with 7.28 last year, reflecting the large death loss of young pigs due to the unusually cold winter. Death loss of hogs and pigs of weaning age and older was about one-fifth higher than for the December 1975 - May 1976 period.

Pig crop in the 14 Quarterly States at 37.1 million head during December 1976 - May 1977 was 3 percent above a year earlier. The pig crop for the December - February quarter was 15.7 million head, up 8 percent. The March - May quarter totaled 21.4 million, down one percent.

FARROWING INTENTIONS: U.S. hog producers intend to farrow 6.1 million sows during the June - November 1977 period. This is an increase of 5 percent from the corresponding 1976 period and 24 percent above the same period in 1975.

If these intentions are realized along with an average litter rate, a pig crop of 44.4 million would be expected. If these projections are realized the pig crop would be 5 percent more than the June - November pig crop of 1976 and the largest since the 1971 June - November total.

The 14 Quarterly States expect to farrow 5.3 million sows during June - November 1977, up 5 percent from 1976. An increase of 5 and 4 percent is expected for the June - August and September - November quarters, respectively.

			1977	45.5	54.1

1/ BREEDING TOTAL IS DIFFERENCE BETWEEN MARKET HOGS AND TOTAL HOGS.

RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from Probability Surveys. Information was collected by mail, telephone and personal interviews. Since all operations with hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about two percent at the U.S. level for hog inventory. This means that chances are approximately 95 out of 100 that a survey estimate will be within four percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, recording and processing the data and mistakes in reporting. These errors cannot be measured directly, but they are minimized through rigid quality controls on the data collection process and a careful review of all reported data for consistency and reasonableness.

In setting the inventory estimates, the Crop Reporting Board constructed a U.S. balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. This balance sheet provided an additional check on survey inventory estimates.

APPROVED:

ACTING SECRETARY OF AGRICULTURE
