DECEMBER 1 INVENTORY: U. S. inventory of hogs and pigs is estimated at 57.6 million head on December 1, 1977, according to the Crop Reporting Board. This is 5 percent above a year earlier, 17 percent more than December 1, 1975 and the largest December 1 inventory since 1973.

--- Number kept for breeding hogs, at 8.8 million, is up 9 percent from a year ago and 16 percent above two years ago.

--- Number for market, at 48.8 million, is 4 percent above last year and 17 percent more than December 1, 1975.

The 14 Quarterly States had 49.3 million head on December 1, up 5 percent from a year earlier and 18 percent more than December 1, 1975. These 14 States accounted for 86 percent of the total U. S. hog and pig inventory.

1977 PIG CROP: The U. S. pig crop for 1977 totaled 88.2 million head, 5 percent more than during 1976 and 24 percent above the 1975 pig crop.

--- December 1976 - May 1977 pig crop, estimated at 43.0 million head, is up 2 percent from a year earlier and 21 percent more than two years ago.

--- June - November 1977 pig crop, estimated at nearly 45.3 million head, is 7 percent more than a year ago and 27 percent above the June - November 1975 crop.

The previous six-month pig crop (June-November) is 78.6 percent of the December 1 all hog inventory compared with 76.9 percent a year earlier.

The 6.3 million sows that farrowed during June - November 1977 was 8 percent more than a year earlier. The average litter size during this period was 7.19 compared with 7.22 a year earlier.

In the 14 Quarterly States, the June - August 1977 pig crop totaled 19.6 million head, up 7 percent from a year ago. For the September - November period, the crop was 19.5 million, up 9 percent from the same period during 1976.

U.S. Quarterly pig crop and pigs per litter are included in this release for the years 1975-1977. The 1970-1975 data are available in Statistical Bulletin No. 588. A U.S. annual balance is also included.

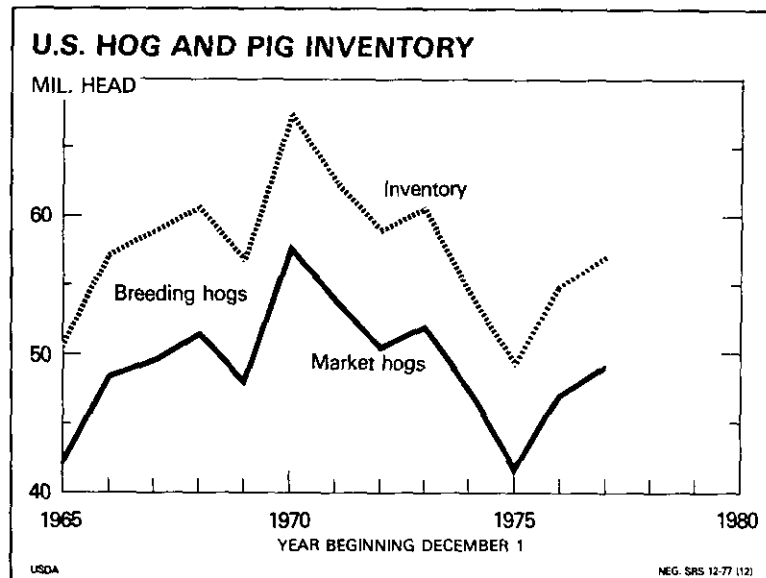

FARROWING INTENTIONS: U.S. Hog producers intend to farrow 6.6 million sows during the December 1977-May 1978 period, an increase of 9 percent from the same period a year earlier and 15 percent above two years ago.

These intentions and a projected litter size indicate a pig crop of 48.0 million, 12 percent above a year earlier and 14 percent more than December 1975 - May 1976.

Intentions in the 14 Quarterly States total 2.6 million head to farrow during the December 1977-February 1978 period, 13 percent more than a year earlier. The March - May 1978 intentions at 3.1 million, are 8 percent above the March - May 1977 quarter.

RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from Probability Surveys. Information was collected by mail, telephone and personal interviews. Since all operations with hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about two percent at the U. S. level for hog inventory. This means that chances are approximately 95 out of 100 that a survey estimate will be within four percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, recording and processing the data and mistakes in reporting. These errors cannot be measured directly, but they are minimized through rigid quality controls on the data collection process and a careful review of all reported data for consistency and reasonableness.

In setting the inventory estimates, the Crop Reporting Board constructed a U. S. balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. This balance sheet provided an additional check on survey inventory estimates.

APPROVED:

John C. White
