In this Issue:

- * Inventories
- * Sows Farrowing
- * Pig Crop

Revisions for 1977:

- * Inventory, September 1 and December 1
- * Sows Farrowing and Pig Crop, June-November

INVENTORY 1 PERCENT HIGHER: Inventory of hogs and pigs on June 1, 1978 in the U S was estimated at 54.9 million head, 1 percent above last year and nearly 2 percent higher than two years ago, according to the Crop Reporting Board. The inventory increase was limited by death losses which were about one-fifth more than a year ago due to effects of prolonged cold weather and disease problems.

-- Breeding inventory, at 8.8 million head, was 1 percent higher than a year ago and 5 percent above two years earlier.

-- Market hog inventory, at 46.1 million head, was nearly 1 percent above both last year and 2 years ago. The increased number of market hogs in the heavier weight groups reflects some holdover from the late fall pig crop due to the severe winter weather which limited weight gains.

The 14 Quarterly States estimate was 86 percent of the U S total inventory. These States, with 47.0 million head, were nearly 1 percent above 1977 and 2 percent above 1976.

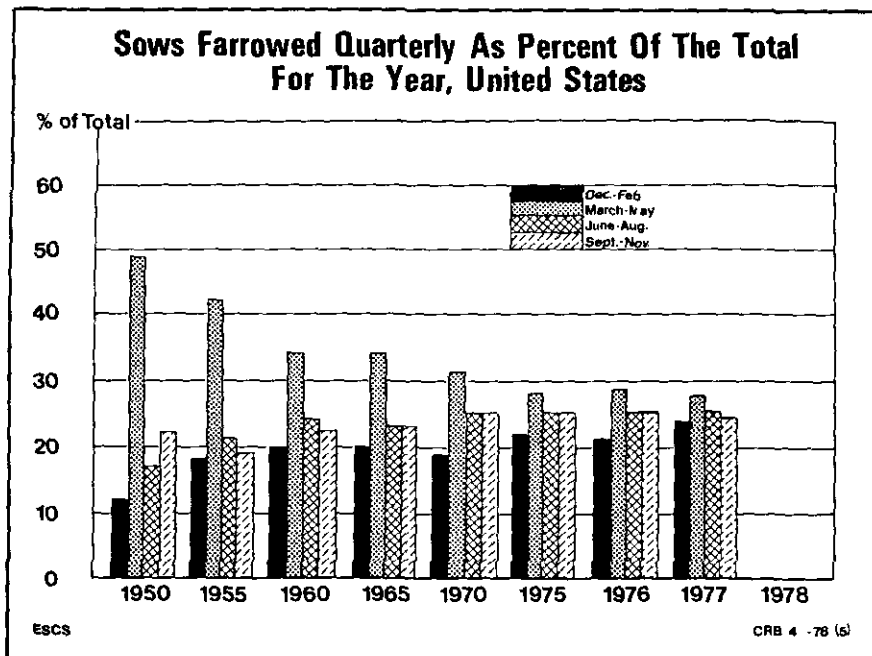

PIG CROP (DECEMBER 1977 - MAY 1978): The December 1977 - May 1978 U S pig crop was 42.3 million head, 1 percent below last year, but slightly above two years earlier.

Slightly more than 6.01 million sows were farrowed during this 6 months period, 1 percent below the number farrowing last year. Pigs saved per litter at 7.04 were the lowest since 1960. A smaller litter size combined with conception problems reduced the expected pig crop for this period.

In the 14 Quarterly States, The December-May pig crop was 36.3 million head, 2 percent below last year. The December-February pig crop at 15.6 million was slightly above last year, while the March-May total, at 20.7 million head, declined 3 percent from 1977.

FARROWING INTENTIONS: U S producers intend to farrow 6.25 million sows during the June-November period, an increase of 4 percent from the same period in 1977 and 7 percent above the corresponding period in 1976.

Intentions in the 14 Quarterly States for June-August are 2.69 million sows, an increase of 3 percent over this quarter in 1977 but virtually unchanged from the intentions published in the March 1 report. For the September-November quarter, these States intend to farrow 2.64 million sows, 3 percent more than the comparable period in 1977.

RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from probability surveys. Information was collected by mail, telephone and personal interviews. Since all operations with hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about two percent at the U S level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within four percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to unexpected economic and environmental conditions. These differences have exceeded four percent for about one-third of the quarterly pig crops during the last five years.

In setting the inventory estimates, the Crop Reporting Board constructed a U S balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. This balance sheet provided an additional check on survey inventory estimates.

APPROVED:

Carol T. Foreman
