

# HOGS AND PIGS

Statistical Reporting  
Service

U.S. Department  
of Agriculture  
Washington, D.C.  
20250

Released: June 22, 1983  
3:00 P.M. ET

In this Issue:  
\* Inventories  
\* Sows Farrowing  
\* Pig Crop

Revisions for 1982 and 1983:  
\* December 1, 1982 Inventory  
\* March 1, 1983 Inventory  
\* September-November 1982 Pig Crop  
\* December-February 1983 Pig Crop

INVENTORY UP 11 PERCENT: Inventory of all hogs and pigs in the U.S. is estimated at 57.5 million head on June 1, 1983, according to the Crop Reporting Board. This is 11 percent above a year ago but 4 percent below 1981

-- Breeding inventory, at 8.07 million head, was 9 percent more than a year ago, but 3 percent below two years ago.

-- Market hog inventory, at 49.4 million head, was 11 percent more than a year ago, but 4 percent below two years ago.

Estimates for the 10 Quarterly States account for about 79 percent of the U.S. total inventory. These States, with 45.3 million head, were up 10 percent from last year but 2 percent below 1981.

PIG CROP: The December 1982-May 1983 U.S. pig crop was 46.8 million head, a 14 percent increase from last year but 2 percent below two years ago.

Sows farrowing during this 6-month period, at 6.22 million, were 11 percent more than during the comparable period last year. Pigs saved per litter at 7.53 surpasses the previous record high of 7.39 in 1981.

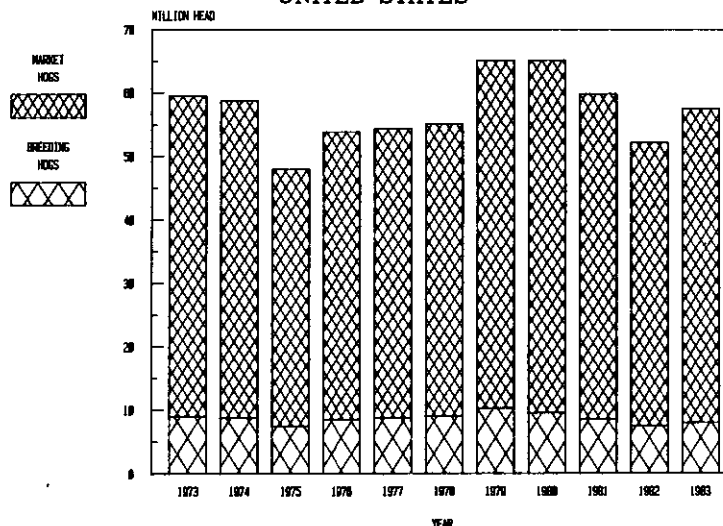

In the 10 Quarterly States, the December-May pig crop was 36.6 million head, 14 percent above last year. The December-February pig crop, at 15.5 million head, was up 11 percent and the March-May total of 21.1 million head was up 17 percent from the corresponding year earlier period.

FARROWING INTENTIONS: U.S. producers intend to have 6.32 million sows farrow during the June-November period, an increase of 9 percent from the same period in 1982 and 1 percent more than in 1981.

Intentions in the 10 Quarterly States for June-August are 2.42 million sows, up 10 percent from the same period in 1982. September-November quarter farrowing intentions, at 2.55 million sows, are up 8 percent from the comparable quarter in 1982.

				1983	8.1	49.4	57.5

1/ 1978, 1979 AND 1981 DO NOT ADD DUE TO ROUNDING.

**RELIABILITY AND ESTIMATING PROCEDURES:** Primary data used in setting these hog estimates were obtained from a sample of farmers across the U.S. using probability surveys. Information was collected by mail, telephone and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about two percent at the U.S. level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within four percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to unexpected economic and environmental conditions. For second intentions these differences have exceeded four percent for about one-third of the quarterly pig crops during the last nine years. For first intentions these differences have exceeded seven percent for about one-third of the quarterly pig crops during the past nine years.

In setting the inventory estimates, the Crop Reporting Board constructed a U.S. balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. This balance sheet provided an additional check on survey inventory estimates.

APPROVED:
