* REVISIONS FOR 1982

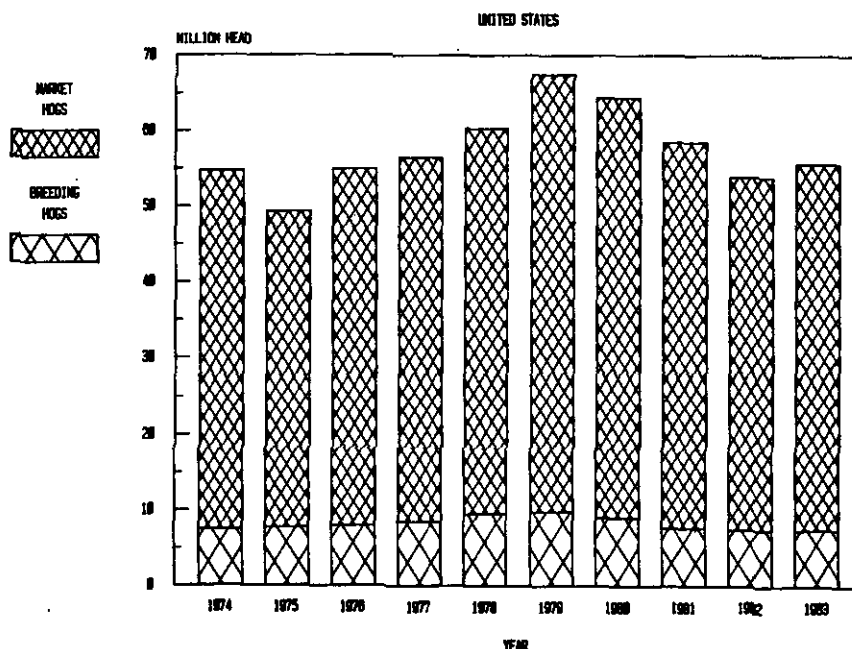

INVENTORY UP 3 PERCENT: U.S. inventory of all hogs and pigs is estimated at 55.8 million head on December 1, 1983, according to the Crop Reporting Board. This is 3 percent above a year ago but 5 percent less than December 1, 1981.

-- Breeding hog inventory, at 7.35 million, is 1 percent below last year and down 6 percent from two years ago.

-- Market hog inventory, at 48.5 million, is 4 percent above a year earlier but 5 percent less than two years ago.

The **10 QUARTERLY STATES**, with 43.4 million head on December 1, 1983, are up 2 percent from a year earlier but down 6 percent from December 1, 1981. These 10 States account for approximately 78 percent of the total U.S. hog and pig inventory.

DECEMBER 1 HOGS AND PIGS INVENTORY

1983 PIG CROP: The U.S. pig crop for 1983 totaled 92.2 million head, 10 percent above 1982 but 2 percent below the 1981 pig.crop.

-- December 1982 - May 1983 pig crop, estimated at 46.8 million head, is up 14 percent from a year earlier but 2 percent below the comparable period two years ago.

-- June - November 1983 pig crop, estimated at 45.5 million head, is 6 percent greater than a year ago but 2 percent below the June - November 1981 crop.

A total of 6.14 million sows farrowed during June - November 1983, 6 percent greater than a year earlier. The litter size during this period averaged 7.41, the same as a year earlier.

In the 10 QUARTERLY STATES, the June - August 1983 pig crop totaled 17.7 million head, 9 percent above the same quarter a year ago. For the September - November period, the pig crop of 17.6 million head is fractionally above the same period during 1982.

FARROWING INTENTIONS: U.S. hog producers intend to have 5.90 million sows farrow during the December 1983 - May 1984 period, 5 percent below a year ago but 6 percent greater than two years ago.

Intentions in the 10 QUARTERLY STATES totaled 2.03 million sows to farrow during December 1983 - February 1984 period, 3 percent less than the same period last year. The March - May 1984 intentions, at 2.54 million, are 8 percent below the March - May 1983 quarter.

RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from a sample of farmers across the U.S. using probability surveys. Information was collected by mail, telephone and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about three percent at the U.S. level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within six percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to unexpected economic and environmental conditions. For second intentions these differences have exceeded four percent for about one-third of the quarterly pig crops during the last ten years. For first intentions these differences have exceeded seven percent for about one-third of the quarterly pig crops during the past ten years.

In setting the inventory estimates, the Crop Reporting Board constructed a U.S. balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. This balance sheet provided an additional check on survey inventory estimates.
