

Hogs and Pigs

United States
Department of
Agriculture

Washington, D.C.

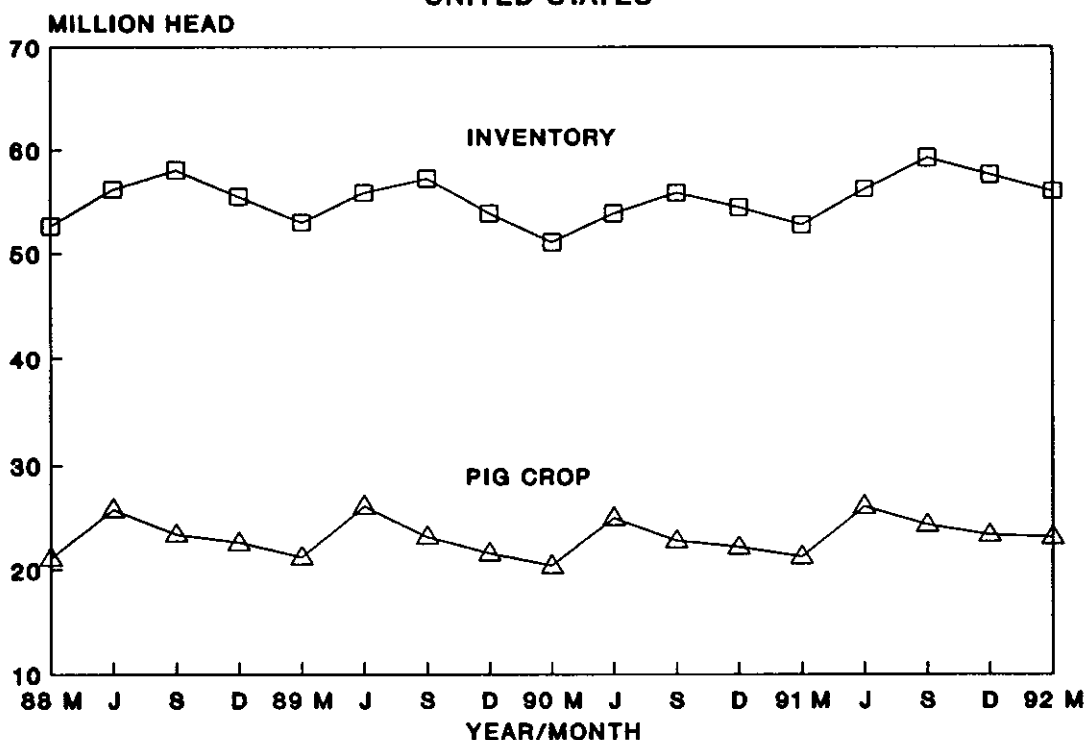

Released March 27, 1992, by the Agricultural Statistics Board. Estimates refer to March 1, 1992 and December 1991–February 1992.

U.S. Hog Inventory Up 6 Percent

U.S. inventory of all hogs and pigs on March 1, 1992, was 56.1 million head. This was 6 percent above March 1991 and 10 percent above the March 1990 inventory.

Breeding inventory, at 7.17 million head, was up 3 percent from March 1, 1991, and 5 percent above March 1990.

MARCH 1 HOGS & PIGS INVENTORY UNITED STATES

Index is located at the end of the report. For information call Doyle Fuchs (202) 720-3106. Office hours are 8:00 a.m. to 4:30 p.m. ET.

Market hog inventory, at 48.9 million head, was 7 percent above March 1, 1991, and up 10 percent from March 1, 1990.

The December 1991-February 1992 U.S. pig crop was 23.2 million head, 9 percent higher than 1991 and 14 percent above the same period in 1990. Sows farrowing during this period totaled 2.89 million head, up 7 percent from last year and 11 percent above a year earlier. Pigs saved per litter was a record high 8.02 compared to 7.87 during December-February 1991.

U.S. producers intend to have 3.32 million sows farrow during the March-May 1992 quarter, 1 percent higher than actual farrowings during the same period last year and 6 percent above 1990. Farrowing intentions for June-August 1992, at 3.08 million sows, are down slightly from actual 1991 farrowings but up 7 percent from 1990.

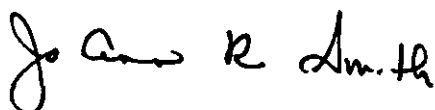

16 State Inventory Increases 7 Percent

The 16 quarterly States, with an inventory of 51.3 million on March 1, 1992, are up 7 percent from last year and 10 percent above March 1, 1990. These 16 States accounted for approximately 91 percent of the total U.S. hog and pig inventory.

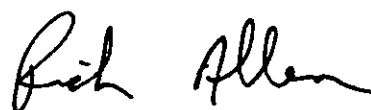

In the 16 quarterly States, the December 1991-February 1992 pig crop was 21.1 million head, up 9 percent from last year and up 15 percent from two years ago. There were 2.62 million sows that farrowed during December-February, up 7 percent from a year earlier and 12 percent more than during the same period two years ago. Sows farrowing during December 1991-February 1992 in the 16 States averaged a 8.05 pigs per litter, a new record high. This compares with 7.89 during the comparable period a year ago.

Intentions in the 16 quarterly States for March-May 1992 are 3.03 million head, up 1 percent from the corresponding period last year and 6 percent above 2 years ago. June-August 1992 intended farrowings, at 2.81 million head, are slightly lower than actual farrowings a year earlier, but 8 percent more than in 1990.

This report was approved on March 27, 1992, by the Acting Secretary of Agriculture and the National Agricultural Statistics Service's Agricultural Statistics Board.

Acting Secretary of
Agriculture
Jo Ann R. Smith

1/ Number of Pigs born during September-November that were on hand December 1, or had been sold.

2/ Individual State estimates not available for 34 States.

Reliability of March 1 Hogs and Pigs Estimates

Survey Procedures: A random sample of U.S. producers was surveyed to provide data for these estimates. Survey procedures ensured that all hog and pig producers, regardless of size, had a chance to be included in the survey. Large producers were sampled more heavily than small operations. Data were collected from about 78,500 operators during the first half of March by mail, telephone, and face-to-face personal interviews. Regardless of when operators responded, they were asked to report inventories as of March 1.

Estimation Procedures: These hogs and pigs estimates were prepared by the Agricultural Statistics Board after reviewing recommendations and analysis submitted by each State office. National and State survey data were reviewed for reasonableness with each other and with estimates from past years using a balance sheet. The balance sheet begins with the previous inventory estimate, adds to it estimates of births and imports, and subtracts estimates of slaughter, exports, and deaths. This indicated ending inventory level is compared to the Agricultural Statistics Board estimate for reasonableness.

Revision Policy: Revisions to previous estimates are made to improve quarter to quarter relationships. Estimates for the previous quarter are subject to revision when current estimates are made. In June, estimates for the previous March and December are reviewed and in December, estimates for all quarters of the previous two years are reviewed. The reviews are primarily based on hog check-off receipts and hog slaughter. Estimates will also be reviewed after data from the Department of Commerce's five-year Census of Agriculture are available. No revisions will be made after that date.

Reliability: Since all operations raising hogs are not included in the sample, survey estimates are subject to sampling variability. Survey results are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording, and processing the data. The effects of these errors cannot be measured directly. They are minimized through rigid quality controls in the data collection process and through a careful review of all reported data for consistency and reasonableness.

To assist users in evaluating the reliability of the estimates in this report, the "Root Mean Square Error" is shown for selected items in the table below. The "Root Mean Square Error" is a statistical measure based on past performance and is computed using the differences between first and final estimates. The "Root Mean Square Error" for hog inventory estimates over the past 12 quarters is 0.9 percent. This means that chances are 2 out of 3 that the final estimate will not be above or below the current estimate of 56.1 million head by more than 0.9 percent, or about 505,000 head. Chances are 9 out of 10 that the difference will not exceed 1.6 percent, or about 897,000 head (the 90 percent confidence level).

The table below also shows a 12-quarter record of the range of differences between first and final estimates for selected items. Using estimates of all hogs and pigs as an example, changes between the first inventory estimate and the final estimate during the past 12 quarters have averaged 53,000 head, ranging from 31,000 to 1,130,000 head. During this period the initial inventory estimate has been below the final estimate 5 times and above the final estimate 7 times. This does not imply that the March 1 estimate is likely to understate or overstate final inventory. For most items, the number of quarters the initial estimates have been below or above the final estimate is about equally distributed.

Reliability of March 1 Hog Estimates 1/

	Root Mean Square Error	90% Confidence Level		Difference Between First and Final Estimates <u>2/</u>			Number of Quarters	
				Average	Smallest	Largest	First Above Final	First Below Final
	Percent		1,000 Head				Number	
All Hogs & Pigs	0.9	1.6	897	-53	-31	-1130	7	5
Pig Crop	1.2	2.2	510	67	-43	-562	5	7
Expected Farrowings								
Next Quarter	2.7	4.9	163	-17	-16	132	8	4
Following Quarter	3.8	6.7	206	27	-2	214	6	6

1/ Based on quarterly data from March 1989 through December 1991.

2/ Records for the past 12 quarters.
