

milk production

JANUARY 1972

Release:
February 10, 1972
3:00 P.M. EST

JANUARY MILK PRODUCTION 1 PERCENT ABOVE A YEAR EARLIER

U. S. milk production during January is estimated at 9,635 million pounds, up about 1 percent from January 1971. Milk output increased 2 percent from December to January, 1 point less than the increase between these two months a year earlier. Milk production in January provided 1.49 pounds of milk per person daily for all uses, the same as January 1971, but more than the 1.46 pounds per person in December 1971.

PRODUCTION PER COW UP 2 PERCENT, MILK COWS DOWN 1 PERCENT

January milk production per cow was 785 pounds, up 2 percent from a year ago and about 3 percent more than December 1971. The January 1972 rate per cow was at a record high in 30 of the 34 States with monthly estimates. It was highest in California, at 935 pounds, followed by: Washington, 915 pounds; Minnesota, 880 pounds; and New York, 860 pounds.

Milk cows on farms during January totaled 12,276,000, down 1 percent from the same month last year.

MILK FEED PRICE RATIO 10 PERCENT ABOVE LAST YEAR

The January milk feed price ratio, at 1.85, was 10 percent higher than a year ago. The increase resulted from an 18 cent increase in the price of all milk and a 23 cent decrease in ration value. Seasonally, the ratio decreased 2 percent from December compared with a 6 percent decrease between these two months a year earlier.

Special in this issue
MILK COWS AND MILK PRODUCTION
Revised 1970-71

MILK COWS AND MILK PRODUCTION - 1971

The Nation's milk cows produced 118.6 billion pounds of milk in 1971, 1.3 percent more than the revised estimate of 117.1 billion pounds produced in 1970. The annual average number of milk cows on farms in 1971 was a record low - 12,347,000, down 1 percent from 12,483,000 in 1970. Output per cow reached a record high rate of 9,609 pounds in 1971, 2 percent above the previous record of 9,385 pounds in 1970. The revised estimates for 1970 and 1971 are based on an annual review of more complete production and utilization data.

Milk production in 1971 was 7 percent below the record 1964 production of 127.0 billion pounds. Wisconsin's milk production for 1971, at 18.9 billion pounds, was the highest in the Nation, followed by: New York, 10.4 billion, California, 9.7 billion; and Minnesota, 9.6 billion pounds. Of the 10 leading milk producing States, 7 had larger production than a year earlier. The 10 leading milk producing States accounted for 64 percent of the total U. S. production in 1971. Milk production was above a year earlier during all 12 months of 1971--with the largest increase 2 percent in both January and September. Each of the other months were up 1 percent.

Rate per cow was above a year earlier in all but 6 States. The highest annual rate per cow was 11,985 pounds in California. Following were: Arizona, 11,700 pounds; Washington, 11,554 pounds; Connecticut, 10,629 pounds; and New York, 10,525 pounds. 30 States had rates of over 9,000 pounds of milk produced per cow.

The annual average number of all milk cows on farms in 1971 was a record low 12,347,000, down 1 percent from 12,483,000 in 1970. Milk cows have declined each year since 1953 but the rate of decline has been slowing in recent years.

Inventory numbers for January 1, 1972 of milk cows and heifers that have calved totaled 12,279,000 head, and heifers weighing 500 pounds and over for milk cow replacement totaled 3,942,000. Milk cows were down 1 percent but milk replacement heifers showed a slight increase from 1971. In the Inventory Report milk cows and heifers that have calved are defined the same as milk cows in the Monthly Milk Production Report. However, the estimates in the Inventory Report are the number on farms as of January 1, while the estimates in the Monthly Milk Production Report are the average number on farms during the month.

The following changes in milk production estimates announced in October 1971 are effective with this report.

1. State monthly estimates for milk cow numbers, production per cow and milk production have been discontinued for 16 minor milk producing States. State estimates for 34 States, a combined estimate for the 16 States and estimates for the U. S. will be provided monthly for milk cow numbers, production per cow and milk production. Estimates for each of the 16 States of the number of milk cows at the beginning of the quarter and milk production for the previous quarter will be included in the reports issued in January, April, July and October.

2. Grain and other concentrates fed daily per milk cow in herd on the first of the month is changed from a bi-monthly to a quarterly report. These data will be issued as of January 1, April 1, July 1 and October 1.
