1984 MIDYEAR SUPPLEMENT

FRUIT PRODUCTION AND VALUE UP SLIGHTLY

The Nation's utilized production of the leading noncitrus fruit crops totaled 13.8 million tons (12.5 million metric tons) in 1984, up slightly from 1983 but 3 percent less than 1982. For the major noncitrus crops, production gains registered by apricots, avocados, tart cherries, cranberries, olives, papayas, peaches and California plums more than offset the decreases in apples, sweet cherries, grapes, nectarines, pears, pineapples and dried prunes. There were also production increases for bananas, dates, figs, and kiwifruit. Value of utilized production for noncitrus fruit crops totaled 3.22 billion dollars, up fractionally from 1983 but 8 percent less than 1982. Increases in crop value for apples, apricots, cranberries, peaches, pears, and dried prunes were mostly offset by decreases in the other noncitrus crops, primarily avocados, sweet and tart cherries, grapes, nectarines, pineapples, and California plums.

NUT OUTPUT AND VALUE UP SUBSTANTIALLY

The 1984 season's U.S. nut production, at 858 thousand tons (778 thousand metric tons), was 49 percent more than in 1983 and 25 percent above the 1982 output. Production of pecans in 1984 decreased from the previous season, while almonds, filberts, macadamia nuts, pistachios, and walnuts increased. The total value of the 1984 utilized production of these edible nut crops was 870 million dollars, up 50 percent from a year earlier and 9 percent above the 1982 value. Value decreased for the 1984 pecan crop, but rose for almonds, filberts, macadamia nuts, pistachios, and walnuts.

NONCITRUS FRUITS AND NUTS, PRODUCTION, USE AND VALUE,
1982-84

THIS REPORT INCLUDES PRELIMINARY UTILIZATION AND VALUE ESTIMATES FOR "LATE SEASON" FRUIT AND NUT CROPS NOT PREVIOUSLY REPORTED. ALSO INCLUDED ARE REVISED END-OF-SEASON ESTIMATES FOR CERTAIN "EARLY" CROPS FIRST REPORTED IN THE 1984 ANNUAL SUMMARY PUBLISHED ON JANUARY 14, 1985. UTILIZATION, PRICE, AND VALUE FOR THE 1984 CRANBERRY CROP WILL BE RELEASED AUGUST 20, 1985 IN THE CRANBERRY REPORT. ESTIMATES FOR THE BUSHBERRY CROPS AND APPLES BY VARIETY HAVE BEEN DROPPED FROM THE ESTIMATING PROGRAM AND ARE NO LONGER CARRIED IN THESE DATA SERIES.

DEFINITIONS OF TERMS

Total Production - is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic or natural reasons.

Utilized Production - is the amount sold plus the quantities used at home or held in storage.

Unutilized Production - is the difference between total and utilized production which is fruit not harvested for economic or natural reasons and harvested fruit not sold or utilized.

Utilization - refers to first utilization, not necessarily final utilization. For example, frozen fruit includes some fruit that may be later used for making preserves. Grade-outs for fresh market fruit which are processed are included in the processing quantity. Fruit graded-out from canning or freezing and utilized for juice is included with juice.

Apples, Commercial Crop - orchards of 100 or more bearing age trees.

Prices - are a season average for all methods of sale. For a crop sold for both fresh market and processing, the season average price is a weighted average of the fresh and processing price.

Prices for fresh fruit are the average prices producers receive at the point of first sale. This is commonly referred to as the average price as sold. Since the point of first sale is not the same for all producers, prices for the various methods of sale are weighted by the proportionate quantity sold. For example, if in a given State part of the fruit is sold f.o.b. packed by growers, part is sold as bulk fruit at the packinghouse door, and some is sold retail at roadside stands, the fresh fruit average price as sold is a weighted average of the average price for each method of sale. The exception is fresh fruit sales in California, Washington and Oregon which are equivalent returns at packinghouse door. The equivalent packinghouse returns represent adjusted prices.

F.o.b. packed prices are adjusted to an equivalent incoming packinghouse door price by subtracting all costs that accumulate between the incoming packinghouse door and the f.o.b. price. These costs include grading, packing, inspecting fees, selling, and other costs.

DEFINITIONS OF TERMS--CONTINUED

Prices for fruit sold for processing are equivalent returns for fruit delivered to the processing plant door except for cranberries and California olives and clingstone peaches which are priced at the first delivery point.

Crop value estimates in this report cover the marketing season or crop year and should not be confused with cash receipts from these crops which are on a calendar year. The following procedure is used to compute State values for all commodity groups:

State Value Computation Procedure

$$\begin{aligned} \text{Fresh Market Value} &= \text{Fresh Market SAP} \quad \times \quad \text{Fresh Market Utilization} \\ \text{Process Market Value} &= \text{Process Market SAP} \quad \times \quad \text{Process Market Utilization} \\ \text{"All" Sales Value} &= \text{Fresh Market Value} \quad + \quad \text{Process Market Value} \\ \text{"All" Sales SAP} &= \frac{\text{"All" Sales Value}}{\text{"All" Sales Utilization}} \end{aligned}$$

For commodities with components not identified by market channel, substitute breakdown name for fresh/processing market and use the same procedure. The procedure used for computation of U.S. season average prices follows:

U.S. SAP Computation Procedure

$$\begin{aligned} \text{Fresh Market SAP} &= \frac{\text{Fresh Market Value for all States}}{\text{Fresh Market Utilization for all States}} \\ \text{Process Market SAP} &= \frac{\text{Process Market Value for all States}}{\text{Process Market Utilization for all States}} \\ \text{"All" Sales SAP} &= \frac{\text{Sales Value for all States}}{\text{Sales Utilization for all States}} \end{aligned}$$
