2001 Noncitrus Fruit Utilized Production Down 12 Percent, Value Down 1 Percent

In 2001, the Nation's utilized production of the leading noncitrus fruit crops totaled 16.5 million tons, down 12 percent from the 2000 level. Utilized production decreased from last year for all crops except cultivated blueberries, red raspberries, cherries, dates, nectarines, olives, papayas, pears, and plums.

Value of utilized production for noncitrus fruit crops totaled 7.84 billion dollars, down 1 percent from 2000. The value of apples increased 14 percent and the value of peaches increased 1 percent. However, the value of grapes decreased 9 percent. The value of strawberries was virtually the same as in 2000.

Highlights

Utilized apple production for 2001 was estimated at 9.21 billion pounds, down 11 percent from the 2000 level. Production in the Central States increased as a result of favorable spring growing conditions but was more than offset by production decreases in the Western and Eastern States.

Utilized grape production for 2001 totaled 6.52 million tons, down 15 percent from the 2000 crop. The California crop, which accounts for 91 percent of the U.S. grape production, was down 16 percent from last year. Also for California, wine type production decreased 8 percent from 2000, raisin type production fell 27 percent, and table type production was 10 percent lower. Utilized production decreased from the previous year in almost all States with California leading the way. The only States increasing from 2000 were Washington and Oregon while Georgia was unchanged.

Utilized peach production in 2001 was estimated at 2.34 billion pounds, down 7 percent from last year and 4 percent below 1999. The California crop, accounting for 72 percent of the U.S. peach production, was down 7 percent from 2000. For California, Clingstone peaches were down 11 percent and Freestone peaches were down 2 percent from 2000.

Utilized pear production, at 968,300 tons, was up 2 percent from last year's level. Washington, at 450,000 tons and the top producing State, was up 11 percent. California, at 267,000 tons and the second largest producer, was down 10 percent. Utilized pear production in Oregon, the third largest producing State, was up 5 percent from 2000.

U.S. Nut Production Up 21 Percent, Value Up 2 Percent

The 2001 U.S. nut production (in-shell basis) rose to 1.31 million tons, a 21 percent increase from a year earlier. The pistachio crop totaled 80,500 tons dropping 34 percent from the record high crop of 121,500 tons realized in 2000. Almond production totaled 693,300 tons, up 21 percent from last year. Hazelnut production for the 2001 crop totaled 48,000 tons, more than double the revised 2000 crop of 22,500 tons. Walnut production totaled 305,000 tons, a 28 percent increase from last year. Macadamia production, at 27,000 tons, was up 8 percent from 2000. Pecan production totaled 157,500 tons, a 50 percent increase from last year.

The 2001 U.S. value of utilized nut production increased to 1.51 billion dollars, 2 percent above last year. The almond value was up 5 percent from 2000. Almonds make up 45 percent of total nut value. Pistachios decreased in value by 30 percent due to the drop in production. Hazelnut value increased 68 percent to 33.6 million dollars from the revised 2000 value. The pecan crop translated into a 9 percent decrease in value due to a 40 percent drop in price per pound. The macadamia value increased 6 percent from last season, to 31.3 million dollars.

Definition of Terms

Apples, Commercial Crop refers to orchards of 100 or more bearing age trees.

Bearing Acreage - An orchard, grove, or vineyard is considered bearing when it reaches an age when it can normally be expected to produce a commercially significant quantity of the crop. Bearing age is a function of many factors including variety, rootstock, year planted, etc. Bearing acreage is primarily based upon periodic orchard surveys. In non-survey years, bearing acreage is based on trends, county extension service data, end-of-year production surveys, and other indications.

Prices are a marketing year average for all methods of sale. For a crop sold for both fresh market and processing, the **Marketing Year Average Price (MYA)** is a weighted average of the fresh and processing price.

Prices for fresh fruit are the average prices producers receive at the point of first sale. This is commonly referred to as the **average price as sold**. Since the point of first sale is not the same for all producers, prices for the various methods of sale are weighted by the proportionate quantity sold. For example, if in a given State part of the fruit is sold F.O.B. packed by growers, part is sold as bulk fruit at the packinghouse door, and some is sold retail at roadside stands, the fresh fruit **average price as sold** is a weighted average of the average price for each method of sale. The exception is fresh fruit sales in California, Washington, and New York (apples only) which are equivalent returns at packinghouse door. The equivalent packinghouse returns represent adjusted prices.

F.O.B. packed prices are adjusted to an equivalent incoming packinghouse door price by subtracting all costs that accumulate between the incoming packinghouse door and the F.O.B. price. These costs include grading, packing, inspecting fees, selling, and other costs.

Prices for fruit sold for processing are equivalent returns for fruit delivered to the processing plant door except for cranberries, California olives, and clingstone peaches which are priced at the first delivery point.

Crop value estimates in this report cover the marketing season or crop year and should not be confused with cash receipts from these crops which are on a calendar year.

Total Production is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic or natural reasons.

Unutilized Production is the difference between total and utilized production which is fruit not harvested for economic or natural reasons and harvested fruit not sold or utilized.

Utilization refers to first utilization, not necessarily final utilization. For example, frozen fruit includes some fruit that may be later used for making preserves. Grade-outs for fresh market fruit which are processed are included in the processing quantity. Fruit graded-out from canning or freezing and utilized for juice is included with juice.

Utilized Production is the amount sold plus the quantities used at home or held in storage.

Yield per Acre is based on total production which includes unharvested production and fruit harvested but not sold due to marketing conditions.

State Value of Utilized Production and MYA Price Computations

The following procedure is used to compute State Values of Utilized Production and MYA Prices:

Fresh Market Value = Fresh Market MYA
Times
Fresh Market Utilization

Process Market Value = Process Market MYA
Times
Process Market Utilization

"All" Sales Value = Fresh Market Value
Plus
Process Market Value

"All" Sales MYA = "All" Sales Value
Divided By
"All" Sales Utilization

For commodities with components not identified by market channel, substitute breakdown name for fresh/processing market and use the same procedure.

U.S. MYA Price Computations

The following procedure is used to compute the U.S. MYA Prices:

Fresh Market MYA = Fresh Market Value For All States
Divided By
Fresh Market Utilization For All States

Process Market MYA = Process Market Value For All States
Divided By
Process Market Utilization For All States

"All" Sales MYA = Sales Value For All States

ACCESS TO REPORTS!!

For your convenience, there are several ways to obtain NASS reports, data products, and services:

INTERNET ACCESS

All NASS reports are available free of charge on the worldwide Internet. For access, connect to the Internet and go to the NASS Home Page at: <http://www.usda.gov/nass/>. Select "Today's Reports" or Publications and then Reports by Calendar or Publications and then Search, by Title or Subject.

E-MAIL SUBSCRIPTION

There are two options for subscribing via e-mail. All NASS reports are available by subscription free of charge direct to your e-mail address. 1) Starting with the NASS Home Page at <http://www.usda.gov/nass/>, click on **Publications**, then click on the **Subscribe by E-mail** button which takes you to the page describing e-mail delivery of reports. Finally, click on **Go to the Subscription Page** and follow the instructions. 2) If you do NOT have Internet access, send an e-mail message to: usda-reports@usda.mannlib.cornell.edu. In the body of the message type the word: **list**.

AUTOFAX ACCESS

NASSFax service is available for some reports from your fax machine. Please call 202-720-2000, using the handset attached to your fax. Respond to the voice prompts. Document 0411 is a list of available reports.

Put next year's economic and business outlook in focus at Outlook Forum 2002.

Attend this popular event to hear the latest on market-shaping developments ranging from farm legislation to food safety concerns. Government officials, business leaders and commodity analysts will assess the outlook for 2002 and beyond, and noted economist Larry Chimerine will discuss U.S. and global economic prospects.

Focus sessions featuring rural innovators will highlight trends in bio-energy, contract negotiation, rural development and other areas. To stretch your planning horizon, USDA will release new 10-year commodity projections.

Visit the Forum home page for complete program details and online registration.
