PEANUT STOCKS AND PROCESSING

This report gives final revised monthly data for the Peanut Stocks and Processing reports for the 1962-63 season and seasonal totals for the 1961-62 season. Tables showing amounts of shelled peanuts used in specified products by types and by seasons (1945-62) are also included. According to the Peanut Statistics Act under which these statistics are collected, all shellers, crushers and processors of raw peanuts are required to submit monthly reports of their operations. In most instances the published preliminary monthly reports are based on a complete enumeration of all shellers and crushers and all of the larger processors of raw peanuts. However, due to the large number of processors of raw peanuts there are occasionally a few reports which are not received in time to be included in the first tabulation for that month. All possible corrections are made during the following month, and these corrections, together with any late reports, are included in the revised totals for the month as published in the next report. In most cases, this tabulation will stand as the final report for that particular month. Such few corrections as cannot be made in time for the second report are included in the seasonal reports.
