Potato Stocks Record High, Up 20 Percent

April 1, 2001 **potato stocks** totaled a record high 154 million cwt, up 20 percent from last year and 17 percent above two years ago. Potatoes in storage accounted for 33 percent of the fall storage States' production, up 2 percentage points from a year ago. This year's record high stocks exceeded the previous record set April 1, 1997 by 4 percent.

Disappearance from the start of harvest to April 1 was a record high 308 million cwt. This disappearance was up 5 percent from the last two years and 4 percent above the previous record set during the 1996 season. The disappearance during March was 44.3 million cwt, up 7 percent from last year. Shrink and loss, to this point in the season, was 35.4 million cwt, up 31 percent from last year and 32 percent above two years ago. This disappearance and loss total includes potatoes diverted and destroyed by growers under a cooperative program to reduce surpluses.

Processing of 2000 crop potatoes totaled 151 million cwt to April 1, up 1 percent from last year in comparable States. In March, processors used 19.9 million cwt of potatoes, down 5 percent from last year in comparable States.

Reliability of April 1 Stocks Estimates

The "Root Mean Square Error" for the April 1 stocks estimate is 4.9 percent. This means that chances are 2 out of 3 that the current estimate of 154 million cwt will not be above or below the final estimate by more than 4.9 percent or approximately 7.5 million cwt. Chances are 9 out of 10 (90 percent confidence level) that the difference will not exceed 8.5 percent or approximately 13.1 million cwt.

The 10-year (1991-2000) record of differences between the April 1 stocks estimates and the final estimates averaged 4.9 million cwt, ranging from 0.74 million cwt above the final to 12.8 million cwt below the final. During the 10-year period, the April 1 estimate has been below the final estimate 9 years and above 1 year.

Note: Stocks are defined as the quantity (whether sold or not) remaining in storage for all purposes and uses, including seed potatoes not yet moved, and shrinkage, waste, and other losses that occur after the date of each report. Sales of fall potatoes for all purposes for the past 5 years averaged 90.9 percent of the total fall production. Shrinkage and loss and home use accounted for the remaining 9.1 percent. Most seed for use the following crop year is on hand and remains part of stocks until moved or planted.
