Potato Stocks Up 3 Percent from Last Year

The 15 major potato States held 130 million cwt of potatoes in storage April 1, 2005, up 3 percent from both last year and April 1, 2003. Potatoes in storage account for 32 percent of the 2004 fall storage States' production, 1 percentage point above last year. Disappearance of 274 million cwt of potatoes is down 1 percent from last year and 3 percent below two years ago. Shrink and loss, at 26.8 million cwt so far this season, is up 6 percent from last year and 11 percent above the same date in 2003. Processors in the 9 major States have used 136 million cwt of potatoes this season, down 1 percent from a year ago and 6 percent below two years ago. Dehydrating usage accounts for 27.8 million cwt of the total processing, down 8 percent from last year and 13 percent below the same date in 2003.

¹ Stocks include processor holdings and most of the seed to plant following year's crop. Seed usage for all seasons in 2004 totaled 26.4 million cwt.

² Missing stocks combined into "Other Sts".

NOTE: Stocks are defined as the quantity (whether sold or not) remaining in storage for all purposes and uses, including seed potatoes that are not yet moved, and shrinkage, waste, and other losses that occur after the date of each report. Sales of fall potatoes for all purposes for the past 5 years averaged 90.8 percent of the total fall production. Shrinkage, loss, and home use account for the remaining 9.2 percent.

April Potato Stocks Up 3 Percent from Last Year

The 15 major potato States held 130 million cwt of potatoes in storage April 1, 2005, up 3 percent from both last year and April 1, 2003. Potatoes in storage account for 32 percent of the 2004 fall storage States' production, 1 percentage point above last year.

Disappearance of 274 million cwt from the start of harvest to April 1, is down 1 percent from last year and 3 percent below two years ago. Shrink and loss, at 26.8 million cwt, is up 6 percent from last year and 11 percent above the same date in 2003.

Processors have used 136 million cwt of 2004 crop potatoes so far this season, down 1 percent from a year ago and 6 percent below two years ago. March usage, at 16.6 million cwt, is 3 percent below last year and down 8 percent from two years ago. Idaho and Malheur County, Oregon, processing increased 3 percent from a year ago, while Washington and the rest of Oregon processing decreased 2 percent from last season. Dehydrating usage accounts for 27.8 million cwt of the total processing, down 8 percent from last year and 13 percent below the same date in 2003.

Western States held 91.6 million cwt of potatoes in storage on April 1, up 6 percent from last year but 1 percent below two years ago. Idaho's and Colorado's potato stocks are both up 13 percent from last year and Washington's potato sheds stored 2 percent more than last year. Oregon's potato stocks are down 26 percent, Montana's sheds hold 13 percent less than last year, and California's stocks decreased 10 percent from a year ago.

Central States accounted for 29.6 million cwt of potato stocks on April 1, down 8 percent from last year but 14 percent above two years ago. Michigan's potato stocks are down 16 percent, Minnesota potato sheds stored 14 percent less than last year, and North Dakota's stocks decreased 8 percent. Nebraska and Ohio's potato stocks combined decreased 8 percent from last year. Wisconsin's sheds are the only sheds in the Central States storing more potatoes than last year, with an increase of 1 percent.

Eastern States stored 8.42 million cwt of potatoes on April 1, up 17 percent from last year and 22 percent above two years ago. Maine's potato sheds hold 15 percent more than last year, Pennsylvania's stocks are up 50 percent, and New York's sheds increased 7 percent from a year ago.

Reliability of April 1 Stocks Estimates

To assist users in evaluating the reliability of the April 1 stocks estimate, the “Root Mean Square Error,” a statistical measure based on past performance, is computed. The deviation between the April 1 stocks estimate and the final estimate is expressed as a percentage of the final estimate. The average of squared percentage deviations for the latest 20-year period is computed. The square root of the average becomes statistically the “Root Mean Square Error.” Probability statements can be made concerning expected differences in the current estimate relative to the final end-of-season estimate, assuming that factors affecting this year’s estimate are not different from those influencing recent years.

The "Root Mean Square Error" for the April 1 stocks estimate is 4.5 percent. This means that chances are 2 out of 3 that the current estimate of 130 million cwt will not be above or below the final estimate by more than 4.5 percent or approximately 5.8 million cwt. Chances are 9 out of 10 (90 percent confidence level) that the difference will not exceed 7.8 percent or approximately 10.1 million cwt.

The 10-year (1994-2003) record of differences between the April 1 stocks estimates and the final estimates averaged 3.0 million cwt, ranging from 9.0 million cwt above the final to 6.5 million cwt below the final. During the 10-year period, the April 1 estimate has been below the final estimate 7 years and above 3 years.
