¹ Stocks include processor holdings and most of the seed to plant following year's crop.

² Missing stocks combined into "Other States".

³ Includes potato stocks in CA and Klamath Co. OR.

⁴ Data not published to avoid disclosure of individual operations.

NOTE: Stocks are defined as the quantity (whether sold or not) remaining in storage for all purposes and uses, including seed potatoes that are not yet moved, and shrinkage, waste, and other losses that occur after the date of each report. Sales of fall potatoes for all purposes for the past 5 years averaged 91.1 percent of the total fall production. Shrinkage, loss, and home use account for the remaining 8.9 percent.

Reliability of June 1 Stocks Estimates

To assist users in evaluating the reliability of the June 1 stocks estimate, the “Root Mean Square Error,” a statistical measure based on past performance, is computed. The deviation between the June 1 stocks estimate and the final estimate is expressed as a percentage of the final estimate. The average of squared percentage deviations for the latest 9-year period is computed. The square root of the average becomes statistically the “Root Mean Square Error.” Probability statements can be made concerning expected differences in the current estimate relative to the final end-of-season estimate, assuming that factors affecting this year’s estimate are not different from those influencing recent years.

The “Root Mean Square Error” for the June 1 stocks estimate is 8.1 percent. This means that chances are 2 out of 3 that the current estimate of 58.4 million cwt will not be above or below the final estimate by more than 8.1 percent or approximately 4.7 million cwt. Chances are 9 out of 10 (90 percent confidence level) that the difference will not exceed 14.0 percent or approximately 8.2 million cwt.

The 9-year (1998-2006) record of differences between the June 1 stocks estimates and the final estimates averaged 2.4 million cwt, ranging from 8.5 million cwt above the final to 180,000 thousand cwt below the final. During the 9-year period, the June 1 estimate has been above the final estimate 4 years and below 5 years.
