## Ready-to-Cook Weight Up 5 Percent from Last Year

Poultry certified wholesome during March 2010 (ready-to-cook weight) totaled 3.70 billion pounds, up 5 percent from the amount certified in March 2009. The February 2010 revised certified total at 3.21 billion pounds, was up slightly from February 2009. The February revision represented an increase of 8.1 million pounds from last month's preliminary pounds certified.

The preliminary total live weight of poultry inspected during March 2010 was 4.92 billion pounds, up 4 percent from 4.71 billion pounds a year ago. Young chickens inspected totaled 4.22 billion pounds, up 5 percent from March 2009. Mature chickens, at 69.6 million pounds, were up 2 percent from the previous year. Turkey inspections totaled 613 million pounds, up 4 percent from a year ago. Ducks totaled 13.6 million pounds, up 2 percent from last year.

Young chickens slaughtered during March 2010 averaged 5.64 pounds per bird, up 2 percent from March 2009. The average live weight of mature chickens was 5.46 pounds per bird, down 6 percent from a year ago. Turkeys slaughtered during March 2010 averaged 29.6 pounds per bird, up 1 percent from March 2009.

Ante-mortem condemnations during March 2010 totaled 12.0 million pounds. Condemnations were 0.24 percent of the live weight inspected, as compared with 0.28 percent a year earlier. Post-mortem condemnations, at 38.5 million pounds, were 1.03 percent of quantities inspected, as compared with 1.15 percent a year earlier.

March 2010 contained 23 weekdays and 4 Saturdays, while March 2009 had 22 weekdays and 4 Saturdays.

## **Terms and Definitions Used for Poultry Slaughter Estimates:**

**Ante-Mortem Condemnations** - Birds condemned prior to their entry into the slaughter plant.

**Certified Ready-to-Cook** - The weight of poultry certified wholesome by inspection after post-mortem condemnation pounds are removed. Ready-to-cook represents poultry meat ready for the marketing channel.

**Ducks** - Includes all ducks regardless of age and weight.

**Mature Chickens** - Fowl from breeder and market egg flocks and stags and cocks.

**Old Turkeys** - Fully matured birds held for egg production, usually over 15 months of age.

**Post-Mortem Condemnations** - Carcasses or parts condemned by the inspector because of disease or mishandling and removed from the slaughter line and destroyed.

**Young Chickens** – Commercially grown broilers-fryers and other young immature birds such as roasters and capons.

**Young Turkeys** - Young birds grown to a matured market age, about 5 months and other turkeys such as fryers/roasters and young breeders.

## Reliability of Poultry Slaughter Estimates

**Data Sources:** Data for poultry slaughter estimates are collected by inspectors of the Food Safety and Inspection Service (FSIS), USDA for all Federally Inspected (FI) plants. Over 99 percent of the total U.S. slaughter for any species is under FI. The number of head slaughtered daily, by species and class, as well as condemnations and total live and dressed weights are obtained by shift for each plant. Approximately 310 plants slaughtered poultry in the U.S. under Federal Inspection in 2009. Young chickens were slaughtered in 34 States, young turkeys in 27 States.

**Revision Policy:** Data for the previous month and year-to-date totals are subject to revision the following month after the initial monthly estimates are published. Final data are published in the annual summary released in February and include any revisions made to current year's and previous year's published data. Revisions are generally the result of late reports or corrections received by FSIS from plants and are usually less than one-half of 1 percent. No revisions will be made to the previous year's data after publication of the annual summary in February.

**Procedures and Reliability:** Plant inspectors submit data electronically for each shift a plant operates. An edit provides checks for the detection of errors such as invalid plant information, duplication, and erroneous data. Data are accumulated to monthly totals for this release.

Data for major slaughter plants with missing reports are adjusted prior to publication to assure that all plants slaughtering a significant portion of a specific class are included. Estimates for missing shifts are made only after verifying that the plant was in operation. Adjustments are based on a shift determined to be similar to the one missing. Late reports replace imputed data as they become available. While there is a varying degree of incompleteness from month to month, it has only a minimal impact on the published totals.

Poultry slaughter estimates are based on a census of operating plants and, therefore, have no sampling error. However, they may be subject to errors such as omissions, duplications, and mistakes in reporting, recording, and processing the data. These errors are minimized through strict quality controls in the edit and summarization process, and a careful review of all reported data for consistency and reasonableness.
