HIGHLIGHTS

CORN growers intend to plant 74.8 million acres in 1990, up 4 percent from last year.

SOYBEAN growers intend to plant 59.4 million acres in 1990, 2 percent below 1989.

SORGHUM growers intend to plant 11.5 million acres this year, down 9 percent from 1989.

BARLEY producers intend to seed 8.89 million acres in 1990, down 3 percent from last year.

OAT producers expect to seed 11.0 million acres this year, down 9 percent from 1989. Harvested acreage is estimated at 6.35 million acres, down 8 percent from 1989.

WINTER WHEAT seeded acres are estimated at 57.2 million acres, up 4 percent from a year ago.

DURUM WHEAT producers plan to seed 3.35 million acres, down 12 percent from last season.

OTHER SPRING WHEAT acreage is expected to total 17.0 million acres, 4 percent less than 1989.

HAY producers plan to harvest 62.0 million acres this year, 2 percent less than last year and 5 percent below 1988.

ALL COTTON prospective plantings for 1990 total 12.4 million acres, 17 percent above 1989, but 1 percent below 1988.

ALL RICE acreage is expected to total 2.90 million acres, up 6 percent from a year ago.

PEANUT planting intentions total 1.71 million acres for 1990, up 3 percent from both the 1989 and 1988 levels. The largest acreage increase is in the Southwest region.

TOBACCO growers expect to harvest 731 thousand acres in 1990, up 6 percent from 1989 and 15 percent greater than 1988.

DRY EDIBLE BEAN growers intend to plant 2.07 million acres this year, up 11 percent from last year and 39 percent above 1988.

* SEE NOTICE ON PAGE A-3. *

PROSPECTIVE ACREAGE OF OILSEEDS AND
FOOD GRAINS INCREASE, FEED GRAINS UNCHANGED

Oilseed acreage (soybeans, cotton, peanuts, sunflower, and flaxseed) is expected to total 75.6 million acres, up 1 percent from last year. Area planted to food grains (wheat, rice, and rye) at 82.3 million acres, is also up 1 percent from 1989. The intended 1990 feed grains acreage (corn, oats, barley, and sorghum) of 106 million acres is virtually the same as last year.

1/ INTENDED PLANTINGS IN 1990 AS INDICATED BY REPORTS FROM FARMERS.

2/ AREA HARVESTED.

NOTICE

This report is based on voluntary responses from approximately 75,000 farmers and ranchers. The National Agricultural Statistics Service collected these acreage data as part of the Agency's quarterly agricultural surveys. Data included in this survey were collected between March 1 and March 15. The report is intended to assist producers in formulating their acreage plans for 1990. Actual acreage planted may vary from intentions because of the effects of weather, availability of production inputs, changes in market conditions prior to planting, and the indications from this report.

Data users are reminded that this report includes intentions to plant for all purposes. A considerable portion of Government reserve acres is seeded to oats as a cover crop; therefore, for the first time this report includes oats acres intended for harvest.

This report includes an updated winter wheat area seeded estimate for the 1990 crop. The first winter wheat production forecast will be published in "Crop Production" released May 10, 1990.

1/ INCLUDES BINDER TYPES GROWN IN OHIO. ESTIMATES DISCONTINUED IN 1989 BECAUSE OF LIMITED ACREAGE.

U.S. PLANTED ACRES CORN AND SOYBEANS

CORN: Farmers intend to plant 74.8 million acres of corn for all purposes in 1990, up 4 percent from last year and 10 percent from 1988.

Farmers in Illinois and Iowa are anticipating no change from last year's acreage. Nebraska acreage is expected to be up 300 thousand acres and Minnesota growers intend to plant 200 thousand acres more than last year. Ohio farmers expect to plant 450 thousand acres more than last year when wet conditions during May prevented them from planting all of their intended acreage.

Kentucky growers expected to plant 20 thousand acres more than last year, while North Carolina farmers intend to plant 250 thousand more acres than a year earlier. Texas farmers are anticipating a 200 thousand acre increase.

In the Northeast, New York farmers intend to increase corn acreage 12 percent, while Pennsylvania farmers expect to decrease acreage by 4 percent from last year. In the West, California and Colorado are expecting acreage decreases.

SORGHUM: Producers intend to plant 11.5 million acres of sorghum for all purposes in 1990, down 9 percent from last year. Most States are expecting lower planting levels than in 1989.

Kansas and Texas acreages are both off 400 thousand acres from last season. Missouri and Nebraska report 50 thousand acre declines.

OATS: Producers plan to seed 11.0 million acres of oats in 1990, down 9 percent from the 12.1 million acres seeded last year. Oat seeded acreage is expected to increase in Texas and Wisconsin, but decline in Iowa, Minnesota, and South Dakota.

Growers intend to harvest 6.35 million acres of oats for grain in 1990. This is 8 percent below the 6.87 million acres harvested in 1989. South Dakota growers expect to harvest 950 thousand acres of oats, down 14 percent from last year. North Dakota farmers intend to harvest 750 thousand acres, 15 percent more than last year.

BARLEY: Producers intend to plant 8.89 million acres of barley in 1990, down 3 percent from the 9.18 million acres planted last year. Growers in North Dakota expect to plant 2.80 million acres, the same as a year ago. Montana, with the second largest acreage, at 1.70 million acres, is also unchanged from last year. Percentage changes from 1989 for other major producing States are as follows: Minnesota, up 8; Idaho, down 3; and South Dakota, down 7.

ALL WHEAT: Area planted for 1990 is expected to total 77.6 million acres, a 1 percent increase from 1989.

WINTER WHEAT: Seeded area for 1990 is now placed at 57.2 million acres, up 4 percent from last season. This current estimate is nearly the same as the seedings published January 11, 1990.

Rains since January 1, coupled with warm weather, have the Kansas crop showing good growth. Insect and disease damage have been light; virtually no wind damage has been reported. Little or no winterkill has been reported in Colorado and Nebraska; dry soils are still a concern in Nebraska. Oklahoma's winter wheat was rated in good condition as of March 4. The Texas crop is slowly recovering from poor conditions over the winter. Recent moisture has boosted wheat forage growth.

DURUM WHEAT: Seeded area for 1990 is expected to total 3.35 million acres, down 12 percent from last year. In the northern durum States, intentions to seed are down 10 percent. The Arizona and California seedings finished in February. Fields are in good to excellent condition in both States.

OTHER SPRING WHEAT: Acreage planted is expected to total 17.0 million acres this year, down 4 percent from 1989. Intentions are for increased acreage in Minnesota and the Dakotas, however, reduced planting intentions in Montana and Washington are more than off-setting.

RICE: U.S. 1990 rice acreage is expected to total 2.90 million acres. This represents a 6 percent increase from the 2.73 million acres seeded in 1989. Acreage is expected to be up at least 4 percent in all States except California. Water shortages are expected to hold California's acreage increase to less than 1 percent. Wet field conditions in the Delta have delayed land preparation for seeding.

Long grain acreage is expected to total 2.13 million acres compared with 2.04 million acres seeded in 1989. Area seeded to medium grain is expected to total 748 thousand acres, up from the 644 thousand acres seeded in 1989. Short grain acres are expected to total 21.0 thousand acres, down from the 51.0 thousand acres seeded in 1989.

SOYBEANS: Growers intend to plant 59.4 million acres in 1990, 2 percent below last year but 1 percent higher than 1988.

Most Corn Belt States are expecting acreage decreases in 1990. Indiana is showing the largest decrease, 150 thousand acres. Illinois, Iowa, Michigan, Missouri, and Ohio are all expecting 100 thousand acre decreases. The acreage in Minnesota and Wisconsin is indicated to be the same as last year, while a 200 thousand acre increase is expected in Kansas. Surface moisture levels are adequate to surplus in the major soybean districts in Kansas.

All Southeastern States are expecting acreage decreases from last year, except Kentucky which is unchanged. Georgia is expecting a 250 thousand acre decrease. Alabama and North Carolina are both down 100 thousand acres. South Carolina and Florida are down 50 and 20 thousand acres, respectively.

In the Delta region, Louisiana is expecting a 100 thousand acre increase while Arkansas and Mississippi show no change from 1989.

FLAXSEED: Planting intentions for flaxseed are estimated at 190 thousand acres in 1990, 9 percent below 1989 and 31 percent below 1988. If realized, this level would be the lowest of record since planted acreage estimates started in 1919.

North Dakota and South Dakota growers intend to plant fewer acres this year while Minnesota planting intentions are above 1989.

PEANUTS: Growers intend to plant 1.71 million acres of peanuts in 1990, up 3 percent from both the 1989 planted area of 1.67 million acres and the 1988 acreage of 1.66 million.

Southeast growers (Alabama, Florida, Georgia, and South Carolina) currently intend to plant 1.06 million acres which would represent a 2 percent increase from both 1989 and 1988.

In the Virginia-North Carolina region, growers intentions are to plant 255 thousand acres of peanuts. If realized, this would be a 4 percent increase from the 245 thousand acres planted in 1989, and up 3 percent from the 1988 planted area.

Intended planted acreage in the Southwest (New Mexico, Oklahoma, and Texas), is estimated at 400 thousand acres. This region's plantings would be up 5 percent and 7 percent from 1989 and 1988, respectively.

SUNFLOWER: Growers intend to plant 1.87 million acres of sunflower in 1990, 1 percent below 1989 and 8 percent below 1988. Oil-type varieties, at 1.38 million acres, are down 5 percent while non-oil varieties, at 485 thousand acres, are up 13 percent.

North Dakota and Minnesota growers intend to plant more acreage of all sunflower this year, while South Dakota, Kansas, and Texas intentions are down from 1989.

COTTON: Area planted to all cotton for 1990 is expected to total 12.4 million acres, 17 percent above the 1989 plantings, but 1 percent below the 1988 planted area. Upland acreage is expected to total 12.1 million acres, up 19 percent from last year. Growers intend to reduce their plantings of American-Pima cotton to 277 thousand acres, a 26 percent decrease from last year's record high acreage.

Upland cotton growers in the Delta States (Arkansas, Louisiana, Mississippi, Missouri, and Tennessee) intend to plant 3.66 million acres. This is a 23 percent increase from 1989, and up 6 percent from two years ago.

Texas and Oklahoma growers intend to plant 5.90 million acres, an 18 percent increase from last year. Planting has begun in South Texas and in the Rio Grande Valley. Recent moisture in Texas improved the early season outlook.

In the Southeast (Alabama, Georgia, North Carolina, and South Carolina), planting intentions are estimated at 1.02 million acres, up 19 percent from 1989. Above normal rainfall during the first two months of the year in Alabama has resulted in land preparation being one to three weeks behind normal.

Upland planted acreage in the Western States (Arizona, California, and New Mexico) is expected to total 1.51 million acres, up 11 percent from last year. Cotton planting has begun in California and Arizona with 11 percent of Arizona's crop planted as of March 25.

ALL HAY: Farmers report intentions to cut 62.0 million acres of all hay in 1990 compared with 63.4 million in 1989 and 65.1 million acres in 1988. This acreage would be off 2 percent from last year and 5 percent below the acreage harvested in 1988.

Acreage is expected to be down in 22 states, up in 18, and unchanged from last year in the remaining 8 states. States with larger declines in area expected to be harvested include North Dakota, down 500 thousand; Missouri, off 330 thousand; Iowa, down 400 thousand; Wisconsin, 200 thousand lower; Tennessee with a 150 thousand decline; and Colorado, Illinois, Minnesota, and Oklahoma which are each off by 100 thousand acres. States with the greatest increases in expected acreage include Texas, up 390 thousand acres, and South Dakota with a 100 thousand acre increase from last year.

DRY BEANS: Growers of dry edible beans intend to plant 2.07 million acres in 1990, up 11 percent from last year and 39 percent above 1988. Ten of the 14 producing States plan increases from last year; 4 expect acreage declines.

The largest acreage increase is planned in North Dakota where growers intend to plant an additional 80 thousand acres over last year. Neighboring Minnesota expects a 43 thousand acre increase. Michigan acreage should be up 40 thousand, while Kansas acreage will be up 36 thousand acres, two and a half times 1989 plantings. Colorado growers intend planting an additional 25 thousand acres and Nebraska plans call for 20 thousand acres above last year. Smaller increases are planned in Idaho, Montana, Utah, and New York. California growers expect a 38 thousand acre decline in dry beans, diverting short water supplies to higher value crops. Modest acreage declines are also planned in New Mexico, Wyoming, and Washington.

SWEETPOTATOES: Growers intend to plant 93.1 thousand acres of sweetpotatoes in 1990, up 5 percent from last year and 4 percent above 1988. Most of the 11 producing States expect acreages to increase from 1989. However, Texas and New Jersey growers intend to plant fewer acres of sweetpotatoes.

Seedlings are being prepared in hotbeds for transplanting in the major producing States. Field transplanting should become active in April. North Carolina growers expect to plant 37.0 thousand acres of sweetpotatoes this year, a gain of 6 percent from last year. In Louisiana, 21.0 thousand acres are slated for planting, up 11 percent. Alabama, Georgia, and South Carolina growers plan 18, 10, and 9 percent increases, respectively. California acreage is expected to gain 4 percent from last year. In Texas, wet ground has delayed bedding activity.

TOBACCO: Growers intend to harvest 731 thousand acres of tobacco in 1990. If these plans materialize, the area harvested will exceed 1989 by 6 percent, be 15 percent greater than 1988, and would be the largest acreage since 1984. In the 16 tobacco producing states, this year's area is expected to be up in 10, unchanged in 5, and down in 1 State.

Flue-cured growers plan to harvest 417 thousand acres of tobacco. This represents a 7 percent increase from last year and a 14 percent increase from two years ago. With this acreage, flue-cured tobacco will account for 57 percent of all tobacco acreage, the same as a year earlier. North Carolina, with 277 thousand acres, has two-thirds of the flue-cured area, the same proportion as in 1989.

Burley tobacco growers are expecting to harvest 267 thousand acres, 6 percent more than in 1989 and 18 percent above the 1988 area harvested. Burley acreage accounted for 37 percent of the expected all tobacco acreage, the same percent as last year. Kentucky, with over two-thirds of the burley area to be harvested, is up 8 percent from a year ago.

Acreage of Maryland type tobacco, at 12.4 thousand acres, is expected to be 1 percent under both last year and two years ago. Dark fire-cured types are estimated at 17.0 thousand acres, up 6 percent from 1989 and 25 percent above 1988. Dark air-cured tobacco growers expect to harvest 4.24 thousand acres, the same as last year but up 25 percent from 1988.

The prospective acreage of all cigar type tobaccos, at 13.7 thousand acres, is up 6 percent from 1989 and up 16 percent from 1988. Compared with last year, cigar filler and cigar wrapper are unchanged but cigar binder is up 13 percent.

SUGARBEETS: Growers expect to plant 1.40 million acres of sugarbeets in 14 States in 1990. If intentions are realized, planted acreage will be up 5 percent from both a year earlier and two years ago.

Intentions in the 5 leading states are: Minnesota, 359 thousand acres, up 5 percent from 1989; California and North Dakota, each with 190 thousand acres, up 3 and 5 percent respectively, Idaho, 181 thousand acres, 1 percent above last year; and Michigan, 160 thousand acres, 4 percent higher than a year earlier.
