

PULLET CHICKS FOR BROILER  
HATCHERY SUPPLY FLOCKS  
November 1964

December 15, 1964

Domestic placements of pullet chicks for broiler hatchery supply flocks by leading primary breeders totaled 2,039,000 during November 1964, according to the Crop Reporting Board. This was 4 percent less than domestic placements of 2,115,000 chicks in November 1963 and 10 percent less than in November 1962. Total placements (domestic plus exports) were reported at 2,456,000 compared with 2,452,000 a year earlier and 2,723,000 in November 1962. Domestic placements of pullet chicks by leading primary breeders for January through November 1964 totaled 27,422,000, 5 percent less than during the same period of 1963.

The placement data include pullet chicks sold during the month, plus the number of pullet chicks expected from eggs sold during the preceding month. The conversion from eggs to expected pullet chicks was made on the basis of 125 pullet chicks per case of hatching eggs sold. The primary breeders included in this report account for a very large percentage of total supply of replacement pullets for broiler hatchery supply flocks. Sales of replacement pullets by these breeders provide an indication of the potential number of pullets available for addition to hatchery egg supply flocks several months before the pullets will actually move into the flocks.
