Storage stocks of potatoes held by growers and local dealers in fall producing areas of the country totaled 112.7 million hundredweight on February 1, 1968, according to the Crop Reporting Board of the United States Department of Agriculture. This was a record high for February 1 and was 9 percent more than the 103.0 million hundredweight on hand February 1, 1967. These stocks consist of fall potatoes held for all uses on February 1.

Stocks in the <u>eight eastern fall States</u> totaled 37.3 million hundredweight on February 1, 1968, the largest since February 1, 1950 and compared with 35.6 million a year earlier. Maine holdings were 26.6 million, slightly less than the 26.7 million hundredweight on hand a year earlier. February 1 stocks on Long Island were record high while stocks in Upstate New York were below last year. Pennsylvania holdings were the largest since February 1, 1956.

Holdings in the eight central fall States, at 20.7 million hundredweight this February 1, were 8 percent above the stocks of 19.2 million a year earlier. In North Dakota and South Dakota, February holdings were smaller than a year ago and Wisconsin stocks equaled a year earlier. In other central States, stock levels were higher than a year earlier.

In the <u>nine western fall</u> States, stocks were 54.7 million, a record large, and 13 percent more than the 48.2 million on February 1 last year. Holdings were larger in all western States with Idaho estimated at 33.5 million hundredweight, 11 percent more than the February 1, 1967 level of 30.2 million.

Disappearance of 1967 fall crop potatoes from storage during January 1968 was 28.3 million hundredweight, 16 percent above the January 1967 disappearance of 24.3 and a new record high disappearance for January. Disappearance of 1967

fall potatoes from time of harvest to February 1, 1968 was 119.4 million hundredweight and compares with a disappearance of 124.7 million from the 1966 crop during the comparable period. Movement of fall crop potatoes to chippers and fresh market outlets during January, as indicated by rail and truck unloads in 41 cities, was more than a year earlier. Movement to these outlets for the season from time of hervest to February 1 was about the same as a year earlier. The quantity of potatoes processed for other food products (excluding starch and flour) during January was above a year earlier, and season totals to February 1 also were above the comparable 1966-67 period. Movement of fall potatoes to starch factories during January was above a year earlier but for the season to February 1 was below a year earlier level.

Fall Potatoes: Production, December 1, January 1, February 1, and March 1, total stocks, crops of 1959-67 in the 25 fell States
