Turkey Hatchery

Released August 14, 2007, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, U.S. Department of Agriculture. For information on *Turkey Hatchery* call Toby Paterson at (202) 720-0585, office hours 7:30 a.m. to 4:00 p.m. ET.

Eggs in Incubators on August 1 Up 9 Percent from Last Year

Turkey eggs in incubators on August 1, 2007 in the United States totaled 33.5 million, up 9 percent from August 1, 2006. Eggs in incubators were up 1 percent from the July 1, 2007 total of 33.3 million eggs. Regional changes from the previous year were: East North Central up 1 percent, West North Central up 7 percent, North and South Atlantic up 15 percent, and South Central and West up 7 percent.

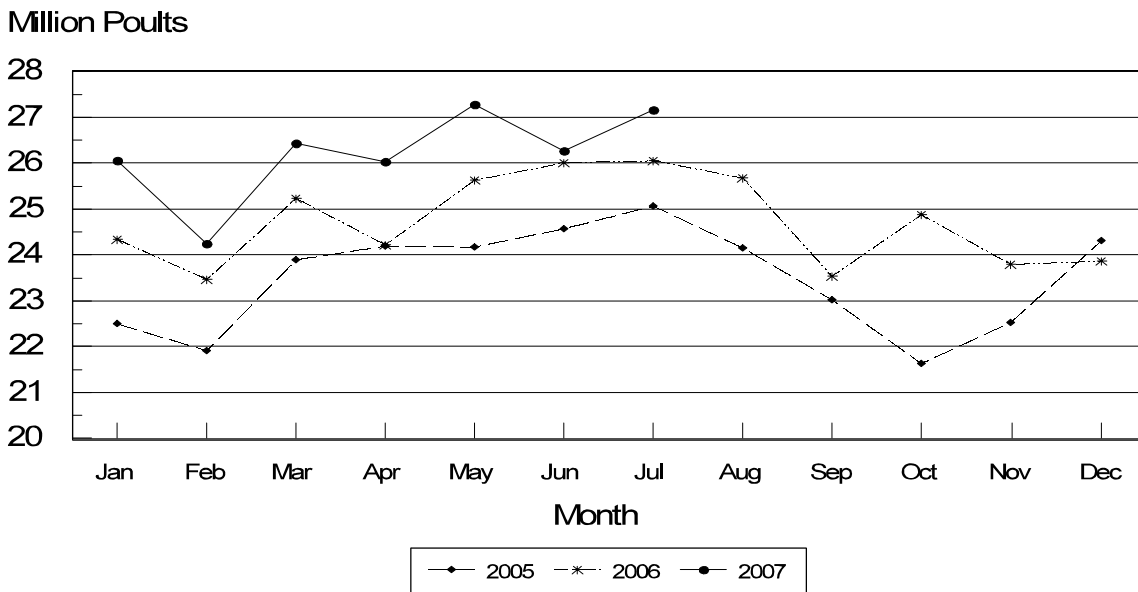

Poults Hatched During July Up 4 Percent from Last Year

Turkey poults hatched during July 2007 in the United States totaled 27.3 million, up 4 percent from July 2006. Poults hatched were up 2 percent from the June 2007 total of 26.7 million poults. Regional changes from the previous year were: East North Central up 3 percent, West North Central up 11 percent, North and South Atlantic up 5 percent, and South Central and West down 9 percent.

Net Poults Placed During July Up 4 Percent from Last Year

The 27.2 million net poults placed during July 2007 in the United States were up 4 percent from the number placed during the same month a year earlier. Net placements were up 3 percent from the June 2007 total of 26.3 million poults.

Reliability of Turkey Hatchery Estimates

Survey Procedures: Data for turkey hatchery estimates are collected from all known turkey hatcheries. Individual NASS field offices maintain a list of all known turkey hatcheries and use known sources of hatcheries to update their lists. Approximately 40 hatcheries are contacted each month. All known turkey hatcheries are mailed a questionnaire as close to the first of the month as possible and given adequate time to respond via mail, fax, or EDR. Those that do not respond are contacted by phone. Care is exercised to ensure that all hatcheries are accounted for in the estimate.

Estimating Procedures: Sound statistical methodology is employed to derive the estimates from reported data. All data are analyzed for unusual values. Data from each operation are compared to their own past operating profile and to trends from similar operations. Data for missing operations were estimated based on similar operations or historical data. NASS field offices prepare these estimates by using a combination of survey indications and historic trends. Individual State estimates are reviewed by the Agricultural Statistics Board for reasonableness. Individual hatchery data are summed to State, regional, and U.S. totals. Only regional and U.S. level estimates are published due to the limited number of hatcheries involved. The Net Poult Placement data includes imported poult from outside the U.S. and excludes poult exported outside the U.S..

Cummulative net poult placements beginning on September 1 and ending on August 31 are shown in the monthly "**Turkey Hatchery**" report. This time period corresponds with the placements of poult which will reach maturity and be available for slaughter during the calendar year.

States reporting turkey hatcheries are: Arkansas, California, Florida, Indiana, Massachusetts, Michigan, Minnesota, Missouri, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, Texas, Utah, Virginia, West Virginia, and Wisconsin.

Revision Policy: Revisions are generally the result of late or corrected data. Revisions to the previous month are published in the monthly "**Turkey Hatchery**" report, while annual revisions are published in the "**Hatchery Production - Annual Summary**" report in April.

Reliability: Turkey hatchery estimates are based on a census of all known operating hatcheries and therefore, have no sampling error. However, estimates are subject to errors such as omission, duplication, and mistakes in reporting, recording, and processing the data. While these errors cannot be measured directly, they are minimized through strict quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

To assist in evaluating the reliability of the estimates in this report, the "Root Mean Square Error" is shown for selected items in the following table. The "Root Mean Square Error" is a statistical measure based on past performance and is computed using the differences between first and final estimates. The "Root Mean Square Error" for turkey eggs in incubators over the past 10 years is 0.8 percent. This means that chances are 2 out of 3 that the final estimate will not be above or below the current estimate of 33.5 million eggs by more than 0.8 percent. Chances are 9 out of 10 that the difference will not exceed 1.6 percent.

Reliability of U.S. August 1 Turkey Hatchery Estimates ¹
