Fungicides were applied to rice fields for disease control. Soybeans, rice were still being sprayed with herbicides to control weeds. Some cotton fields continued to be sprayed for spider mites, aphids, boll weevils. Rice fields were being treated for sheath blight, grasshoppers. Armyworms, thrips were being treated in soybean fields. Some pastures were still being affected by armyworms. Many rice farmers were applying mid-season Nitrogen to their fields. Other activities included: Fertilizing, applying weed control to pastures, as well as, cutting, baling hay. Livestock were in good condition. However, heat, humidity were beginning to stress livestock, poultry. Cattle were being treated for horn flies, internal parasites, as well as, pinkeye. Many reports are received on Friday, may not reflect conditional changes due to weekend weather.

CALIFORNIA: Cotton growth, development was slowed somewhat by hot weather. The bloom was heavy, cotton plants continued to set bolls. Some bolls were starting to open in a few fields. Cotton fields were irrigated, sprayed to control worms, lygus, aphids. Nearly all barley has been harvested. Dried grain fields were treated for fall planting or summer fallowing. Harvest of silage corn continued; good yields were reported. Many fields of corn for grain were nearing maturity. Later corn plantings were in various stages of growth, warmer weather was beneficial. Dry beans were treated with insecticides, primarily for aphids, lygus. Black-eye beans were setting well, harvest was expected to begin soon. Sugarbeet harvesting continued; size, sugar content have been excellent. Alfalfa cutting continued; drying conditions were good. Alfalfa fields were treated for lygus, worms, mites. Alfalfa was cut for green feed. Sudan hay was cut, baled. Herbicides were applied to rice. Rice in some fields was beginning to head. Wild rice harvest was underway. Harvest of sunflower, safflower was beginning. Some sunflower seed fields were treated with defoliants. Growers were conducting summer cultural activities in vineyards, orchards. Weed control, irrigation activities continued. Growers were treating grape vineyards for mildew, leafhoppers. The glassy-winged sharpshooter remains a concern. Picking of grapes for fresh use was active in the San Joaquin Valley. Perlette, Thompson Seedless, Flame Seedless the primary grape varieties moving. Dry weather aided in small grain harvest last week as spring wheat harvested increased to 72 percent harvest, 50 percentage points ahead of last week. Livestock continue to do well with 91 percent of cattle in good to excellent condition and 93 percent of sheep in good to excellent condition. Soil moisture levels continue to decline with 50 percent of the state reporting short or very short topsoil and subsoil moisture conditions.

TEXAS: Only widely scattered showers fell across portions of Southern Plains. Elsewhere extremely hot temperatures and high wind continued to deplete soil moisture and caused delays in land preparation for fall planting. Dryland crops continued to stress in dryer areas and yields could be affected. In some areas dryland crops were being zeroed out or abandoned as a result of dry conditions. Livestock, body condition continued to decline and supplemental feeding increased along with hauling water in some locations. Pastures remained mostly dormant and haying operations declined as the dry conditions continued. Crops under irrigation continued to benefit from rainfall. Insect pressure continued to escalate in a few locations. Many municipalities remained under water rationing and in some locations water was being hauled for home use. Field Crops: Small Grains: Land preparation for fall planting continued but slowed as dry conditions prevailed. Fall planting will be delayed if moisture is not received soon. Corn: Irrigated corn continued to do good progress across the Plains and was moving northward at a fast pace. Yields have been variable in all locations with dry land being the most varied. Corn Borer populations remained active across the Plains. State wide corn condition was rated at 78% normal compared with 88 percent last year. Corn Mature, Published 53%, 1999,51%, Average 49%. Harvested 37%, 1999, 25%, Average 27%. Cotton: Cotton progressed rapidly in most locations and good results of the last few weeks were reached in several locations and some marginal fields were abandoned as the cost to fight insect populations made profit unattainable. In the Plains most fields remained at peak bloom and fruiting well. Harvest activities continued to move northward as conditions for harvest were reached. State wide cotton condition was rated at 68% normal compared with 68% last year. Cotton Harvested, Published, 6%, 1999, 2%, Average 4%. Peanut Harvest continued to good progress on early planted fields in South Central and Upper Coastal areas. Rice heading was completed in most areas and drying down in preparation for harvest began for some other growers. State wide rice condition was rated at 93 percent of normal compared with 94 percent last year. Sorghum: Sorghum that was planted behind wheat continued to head, but was suffering from lack of moisture in some locations where irrigation was not available. Harvesting continued in the Blacklands and central areas under extremely dry conditions. State wide corn condition was rated at 78% compared with 81% last year. Soybeans continued to do good to excellent progress across the Plains, however dryland soybeans continued to suffer. Harvest continued to expand in South Central and Costal areas of the state. Commercial Vegetables, Fruit and Pecans: Rio Grande Valley, preparation for fall planting continued but was interrupted in a few locations as a result of scattered showers. Watermelon harvest continued but was nearing completion in some areas. San Antonio-Winter Garden, harvesting cucumbers, squash, peppers continued. Some planting for fall vegetables also continued but on a limited basis and only where irrigation was available. East Texas, harvest was mostly completed for blueberries and watermelons. Sweet potatoes continued to make good progress in some areas where as in other areas the crop was almost a disaster. Plant diseases decreased with heat levels, but insect levels and dry conditions continued to stress the remaining vegetable crops. High Plains, vegetable progression remained constant. Producers continued to manage irrigation in small areas where irrigation continued and carrot harvest continued. Green bean harvest began in some locations. Pecans: Pecans continued to make good to fair progress across the state. Some nut drop continued in the dryer areas and especially where irrigation was marginal or not possible. Range and Livestock: Conditions for range and livestock continued to move northward with some areas most if not all livestock has been sold as neither forage nor hay supplies could be short. Insect pressure continued to add further injury to hay and haul water to their animals. Other agricultural activities taking place last week included clipping pastures, topping tobacco, and scouting grasshorm and insects.
many pastures and control measures were too costly for many livestock owners.

UTAH: Days suitable for field work 7. Topsoil moisture 34% very short, 39% short, 27% adequate. Subsoil moisture 34% very short, 36% short, 35% adequate. Topsoil and range condition 13% very poor, 39% poor, 33% fair, 15% good. Alfalfa hay: second cutting 89%, 78% 1999, 76% avg; third cutting 17%, 49% avg. Other hay cut 91%, 83%, 1999, 78% avg. Many fires burning rangelands due to extreme heat and lack of rain.

WISCONSIN: Days suitable for fieldwork 5.6. Last week’s temperatures were average to below normal, keeping corn growth behind normal. Warmer temperatures would help keep crops moving toward maturity, and corn especially needs heat for a good crop. Dry weather has allowed a good amount of oats and winter wheat to be harvested. Rain is needed in central Wisconsin. Soil moisture: 6% very short, 32% short, 60% adequate, and 2% surplus. Winter wheat harvested was 86% complete, compared to 93% complete last year, and 69% complete for the 5-year average. Second cutting of hay: 94% 2000, 85% 1999, and 80% 5-year average. Third crop hay was 19% complete, a week ahead of the 5-year average. Pasture feed condition: 4% very poor, 14% poor, 35% fair, 41% good, 7% excellent. Late raspberries are just starting to ripen. Snap bean harvest should begin next week in Door County, with canning green pea harvest nearly complete. Balin straw and haulng manure were some of the other activities farmers completed last week.
