WASDE - 482

Approved by the World Agricultural Outlook Board

May 11, 2010

NOTE: This report presents USDA's initial assessment of U.S. and world crop supply and demand prospects and U.S. prices for the 2010/11 season. Also presented are the first calendar-year 2011 projections of U.S. livestock, poultry, and dairy products. Projections reflect economic analysis, normal weather, trends, and judgment. Because spring planting is still underway in the Northern Hemisphere and remains several months away in the Southern Hemisphere, these projections are highly tentative. National Agricultural Statistics Service (NASS) forecasts are used for U.S. winter wheat area, yield, and production. For other U.S. crops, the March 31 NASS *Prospective Plantings* report is used for planted acreage. Methods used to project harvested acreage and yield are noted on each table.

WHEAT: The 2010/11 outlook for U.S. wheat is for larger supplies as higher beginning stocks more than offset lower production. Beginning stocks are up 45 percent from 2009/10 and the highest in a decade more than offsetting a forecast 8 percent reduction in this year's crop. Total production is projected at 2,043 million bushels, down 173 million from last year. The survey-based forecast of winter wheat production is down 4 percent, but higher yields in Oklahoma, Texas, and a number of the soft red winter wheat states partly offset an 8 percent decline in expected winter wheat harvested area. Spring wheat production is also expected lower as a return to trend yields from last year's record levels lowers production prospects. Durum and other spring wheat production is projected at 585 million bushels, down 16 percent from 2009/10, based on 10-year harvested-to-planted ratios and state yield trends for 1985-2008. U.S. wheat supplies for 2010/11 are projected at 3,103 million bushels, up 4 percent from the current year and the largest since 2000/01.

Total U.S. wheat use for 2010/11 is projected up 3 percent with higher expected domestic use and exports. Food use is projected at 940 million bushels, up 20 million bushels from 2009/10 as flour extraction rates are expected to return to historical averages from their high levels during the past 2 years. Feed and residual use is projected at 190 million bushels, up 10 million bushels from the 2009/10 projection as the larger carryin, particularly for soft red winter wheat, raises feed use prospects. Exports are projected at 900 million bushels, up 35 million bushels from the current year as large, early season supplies and lower prices improve U.S. competitiveness. Despite higher expected use, U.S. ending stocks are projected at nearly 1 billion bushels and the highest since 1987/88. The season-average farm price for all wheat is projected at \$4.10 to \$5.10 per bushel, compared with the 2009/10 projection of \$4.90 per bushel.

Global wheat supplies for 2010/11 are projected 2 percent higher with larger year-to-year beginning stocks more than offsetting lower expected production. Global 2010/11 wheat production is projected at 672.2 million tons, down 1 percent from 2009/10 and the third largest production on record if realized. Larger projected production in EU-27, South America, and the Middle East is more than offset by expected declines in FSU-12, North Africa, South Asia, China, Canada, and Australia.

Global wheat trade is expected to rise slightly for 2010/11 with world exports up 2 percent from 2009/10 at 129.2 million tons. Higher year-to-year exports for Argentina and EU-27 more than offset lower exports for Ukraine, Australia, and Canada. Export prospects for Russia are unchanged for 2010/11 as larger Middle East crops and rising domestic wheat feeding limit export expansion for Russian wheat. Global wheat consumption is projected up 2 percent for 2010/11 with larger global supplies supporting growth in demand. World wheat feeding is projected 3 percent higher with much of the year-to-year increase from rising feeding in FSU-12. Global stocks are projected at 198.1 million tons, up 4.7 million from 2009/10; however, China stocks are projected up 8.3 million tons leaving stocks in the rest of the world down from the current year projection.

COARSE GRAINS: The 2010/11 outlook for U.S. feed grains is for larger supplies with higher beginning stocks and production; however, rising use is expected to limit the growth in ending stocks. Corn

production for 2010/11 is projected at 13.4 billion bushels, up 260 million from 2009/10 as a 2.3-million-acre increase in intended plantings more than offsets a projected decline in yield from last year's record. Based on the rapid pace of 2010 planting as reported in *Crop Progress*, the 2010/11 yield is projected at 163.5 bushels per acre, 2.7 bushels above the 1990-09 trend. Corn supplies are projected at a record 15.1 billion bushels, 325 million higher than in 2009/10.

Total U.S. corn use for 2010/11 is projected up 2 percent from the current year with higher expected food, seed, and industrial (FSI) use and exports more than offsetting a decline in projected feed and residual use. FSI use is projected 4 percent higher with a 200-million-bushel increase in corn used for ethanol accounting for most of the increase. Corn ethanol use, projected at 4.6 billion bushels, is supported by rising Federal biofuels mandates and strong blending incentives that continue to boost ethanol usage. Exports are projected up 3 percent with larger supplies and lower prices, but rising foreign feed grain supplies, mostly corn, limit export growth in 2010/11. Domestic corn feed and residual use is projected down slightly with a slow recovery in animal numbers and increased use of distiller's grains. U.S. corn ending stocks for 2010/11 are projected up 5 percent to 1.8 billion bushels. The season-average farm price is projected at \$3.20 to \$3.80 per bushel compared with the 2009/10 forecast of \$3.50 to \$3.70 per bushel.

Changes to the 2009/10 corn balance sheet include higher FSI use and exports, which are partly offset by lower expected feed and residual use and lower production with downward revisions to harvested area and yields for North Dakota and South Dakota. FSI is revised back to 1997/98 to better reflect net exports of sweeteners and starch as indicated by U.S. Bureau of Census data. These changes raise FSI slightly and lower feed and residual use offsetting amounts. The largest changes are in the most recent years when foreign demand for U.S. corn sweeteners has been strongest. Feed and residual use for 2009/10 is lowered 75 million bushels, in part, reflecting increased availability of distillers grains with a 100-million-bushel increase in projected corn use for ethanol. Exports are raised 50 million bushels based on recent strength in sales and shipments. These changes combine with the 21-million-bushel reduction in 2009/10 production to lower ending stocks 161 million bushels.

Global coarse grain production for 2010/11 is projected at a record 1,129.8 million tons, up 2 percent from 2009/10. Most of the 27.4-million-ton increase in coarse grains production results from higher projected foreign corn production, up 19.9 million tons from 2009/10. Higher expected foreign corn area and rising yields combine with higher U.S. area to boost global corn production to a record 835.0 million tons, up 26.5 million from 2009/10. Corn production is projected higher year-to-year for China, Mexico, India, Russia, EU-27, Ukraine, and Canada. Corn production is expected to be lower in Brazil and South Africa. World coarse grain trade is higher for 2010/11 mostly reflecting rising projected corn imports and exports. Global corn consumption is projected to be record high at 827.9 million tons, up 19.0 million from 2009/10, with nearly three-quarters of the increase in foreign markets. World corn ending stocks are projected at 154.2 million tons, up 7.2 million from 2009/10 and the highest since 2000/01. With stocks for China projected up 6.9 million tons, other country changes year-to-year are mostly offsetting.

RICE: Note: The source of the average milling yield used in the conversion of milled to rough rice in the *WASDE* has changed for the 2000/01 through 2010/11 marketing years. The average milling yield used, expressed as a percent, from the Farm Service Agency (FSA), is calculated from warehouse stored loan data for the different rice classes. Previously, data supplied from the USA Rice Federation were used to calculate the average milling yield (these data are no longer available). The 2010/11 average milling yield at 68.86 percent is based on the average of the previous 5 years.

Larger U.S. 2010/11 rice supplies, combined with a modest increase in use, will boost projected ending stocks and lower farm prices. Total rice supplies in 2010/11 are projected at a record 296.4 million cwt, 9 percent above the previous year, and 7 percent above the previous record in 2005/06. U.S. rice production is projected at a record 244.0 million cwt, 11 percent above 2009/10, and 5 percent above the previous record in 2004/05. Planted area in 2009 is estimated at 3.41 million acres, up 9 percent from 2009 and the largest area since 1999. Harvested area is estimated at 3.39 million acres and is an average of the previous five-year harvested-to-planted ratios. Average rice yield is projected at a near-record 7,202 pounds per acre, up 2 percent from the previous year, but down less than 1 percent from the 2007/08 record. Imports for 2009/10 are projected at 22.0 million cwt, up 5 percent from the previous year.

U.S. 2010/11 rice use is projected at a record 245.0 million cwt, 2 percent above the year earlier. U.S. domestic and residual use is projected at a record 138.0 million cwt, 2 percent above 2009/10. Exports are projected at 107.0 million cwt, 2 percent above revised 2009/10. Despite an expected increase in global import demand, competition for those markets will be greater as U.S. and competitor supplies are expected to be large. U.S. ending stocks in 2010/11 are projected at 51.4 million cwt, 69 percent above the previous year, and the largest stocks since 1985/86.

The 2010/11 long-grain season-average farm price is projected at \$10.00 to \$11.00 per cwt compared to a revised \$12.90 to \$13.10 for the previous year. The combined medium- and short-grain price is projected at \$14.50 to \$15.50 per cwt, compared to a revised \$17.65 to \$17.85 for the year earlier. The 2010/11 all rice price is projected at \$11.15 to \$12.15 per cwt, compared to a revised \$14.05 to \$14.25 per cwt for 2009/10. Large domestic and global supplies and lower Asian prices will pressure U.S. prices.

Global 2010/11 rice production is projected at a record 459.7 million tons, up 17.6 million or 4 percent from 2009/10. World disappearance (consumption and residual) is projected at a record 453.4 million tons, up 10.9 million or 2 percent. Large crops are projected for most of Asia including record or near-record crops in Bangladesh, Burma, Cambodia, India, Indonesia, the Philippines, Thailand, and Vietnam. Additionally, large crops are forecast for the U.S., EU-27, and Nigeria.

Global exports in 2010/11 are projected at 31.4 million tons, up 1.75 million tons or 6 percent from the previous year, and the largest exports since 2007/08. Exports are expected to increase from the previous year in the U.S., Argentina, China, India, Pakistan, Thailand, Uruguay, and Vietnam. Larger imports are projected for the Middle East and Sub-Saharan Africa. Global ending stocks are expected to increase 6.3 million tons or 7 percent from 2009/10 to 96.6 million tons—the largest stocks since 2002/03. The stocks-to-use ratio for 2010/11 at 21.3 percent is up from last year's 20.4 percent, and the highest since 2003/04.

OILSEEDS: U.S. oilseed production for 2010/11 is projected at 99.1 million tons, up less than 1 percent from 2009/10. Soybean production is projected at 3.3 billion bushels, down 49 million from the record crop produced in 2009 as increased planted and harvested area are more than offset by lower yields. Harvested area is projected at a record 77.1 million acres based on an average harvested-to-planted ratio. Soybean yields are projected at a trend level of 42.9 bushels per acre, down 1.1 bushels from the 2009 record. Soybean supplies are projected at 3.5 billion bushels, unchanged from 2009/10 as larger beginning stocks offset lower production. Soybean ending stocks for 2009/10 are unchanged at 190 million bushels as increased exports and crush projections are offset by reduced residual.

Soybean crush for 2010/11 is projected to decline 5 percent. Sharply lower U.S. soybean meal exports are only partly offset by a small increase in domestic soybean meal use. U.S. export prospects are reduced due to increased export competition from Argentina and India. Domestic soybean oil consumption is projected to increase 3 percent as biodiesel production gains more than offset reduced food use. Soybean oil used for biodiesel production is projected at 2.9 billion pounds, up 700 million from 2009/10. A rebound in South American supplies from last year's drought-reduced levels is projected to limit U.S. soybean exports to 1.35 billion bushels in 2010/11, down from a record 1.455 billion in 2009/10. Ending stocks for 2010/11 are projected at 365 million bushels, up 175 million from the projection for 2009/10.

The U.S. season-average soybean price for 2010/11 is projected at \$8.00 to \$9.50 per bushel compared with \$9.50 per bushel in 2009/10. Soybean meal prices are forecast at \$230 to \$270 per short ton compared with \$295 per ton for 2009/10. Soybean oil prices are projected at 34 to 38 cents per pound compared with 36 cents for 2009/10.

Global oilseed production for 2010/11 is projected at a record 440 million tons, up 2.2 million from 2009/10. Foreign oilseed production is projected at 340.9 million tons, up 2 million. Global soybean production is projected to decrease 3 percent to 250.1 million tons. The Argentina crop is projected at 50 million tons, down 4 million from 2009/10 crop based on reduced harvested area and trend yields. Soybean area is projected lower as producers are expected to increase grain and sunflowerseed plantings. The Brazil soybean crop is projected at 65 million tons, down 3 million from 2009/10. A small increase in harvested area is more than offset by lower yields following record yields set for the 2009/10

crop. China soybean production is projected at 15.2 million tons, up 0.7 million from 2009/10 due to higher area and yields. Global production of high-oil content seeds (sunflowerseed and rapeseed) is projected to increase 5 percent from 2009/10, mostly due to increased harvested area. Despite only small gains in global oilseed production, 2010/11 oilseed supplies are up 4 percent as beginning stocks are 19 million tons higher than a year ago. Most of the increase is for soybeans in South America.

Global protein meal consumption is projected to increase 4.6 percent in 2010/11. Protein meal consumption is projected to increase 8.4 percent in China, accounting for 44 percent of global protein consumption gains. Global soybean exports are projected at 87.9 million tons, up 2.5 million from 2009/10. China soybean imports are projected at 49 million tons, accounting for more than half of world soybean trade. Global vegetable oil consumption is projected to increase 4.5 percent in 2010/11, led by increases for China and India.

SUGAR: Projected U.S. sugar supply for fiscal year 2010/11 is down 3.3 percent from 2009/10. Lower beginning stocks and imports more than offset higher production. Higher beet sugar production reflects a return to trend yields, while cane sugar production is increased for Florida and Texas. Imports under the tariff rate quota (TRQ) reflect the minimum of U.S. commitments to import raw and refined sugar and projected shortfall. The Secretary of Agriculture will establish the actual level of the TRQ at a later date. Imports from Mexico are nearly unchanged. Total use is unchanged.

Mexico's 2010/11 sugar supply is up 1.7 percent with higher stocks and production more than offsetting lower imports. Production is projected to increase, as yields rebound to trend levels. Imports reflect mainly U.S. exports. Domestic sugar consumption is down slightly, due to higher use of corn-based sweeteners, and exports are up slightly. Ending stocks increase moderately.

For 2009/10 U.S. sugar, increased supplies nearly offset increased use, compared with a month earlier. Imports are increased under the TRQ and due to expectations for increased high-duty imports. Sugar deliveries are increased to reflect the recent strong pace to date.

LIVESTOCK, POULTRY, AND DAIRY: Total U.S. meat production for 2011 is projected to be slightly higher than 2010 as increased pork and poultry production more than offset declines in beef production. Beef production for 2011 declines on tighter supplies of cattle. Declining cow inventories and calf crops over the past several years, coupled with expected lower imports of cattle during 2011 will result in a smaller pool of cattle available for slaughter. Pork production for 2011 is expected to increase as improved returns encourage increased sows farrowing and carcass weights are heavier. Both broiler and turkey production for 2011 are forecast higher as producers respond to improved returns. Egg production is forecast higher as production gradually builds upon the measured expansion currently underway.

The total meat production forecast for 2010 is reduced from last month as lower red meat production more than offsets higher broiler and turkey production. Forecast beef production is reduced as slightly higher cattle slaughter is offset by expected lighter cattle weights. The pork production forecast is reduced as supplies of hogs for slaughter are tighter than expected. Broiler production is raised as improved returns are expected to encourage increased hatchery activity. The turkey production forecast for the first half of the year is raised based on the most recent slaughter data.

Despite an improved world economy, U.S. beef exports for 2011 are expected to be lower as U.S. production declines and more competitor beef becomes available. Pork and broiler exports are expected to benefit from an improved global economic climate and increased U.S. production. Beef imports are expected to be higher for 2011 as U.S. cow slaughter declines in response to lower cow inventories. Pork imports are forecast higher with relatively strong U.S. pork demand.

The 2010 red meat export forecast is little changed from last month with fractionally higher beef exports reflecting the pace of trade to date. Pork exports are unchanged. Beef imports are forecast lower as competitor supplies of beef are tight and global beef demand is improving with the economic recovery. Broiler exports are forecast lower than last month on weaker shipments to several markets.

For 2011, cattle prices are forecast to rise as demand improves and production declines. Hog prices are forecast lower due to increased production. Broiler and egg prices are also forecast higher on demand strength carried over from 2010. Turkey prices will be slightly lower in 2011.

Cattle, hog, and broiler price forecasts for 2010 are raised from last month as demand improves and supplies are tight. However, turkey and egg price forecasts are reduced.

Milk production for 2011 is forecast to increase as producers respond to improving returns. Cow numbers are projected lower than 2010, but the rate of decline is expected to slow, especially in the latter part of the year. Milk per cow is forecast to increase at a rate similar to 2010. Commercial exports are forecast to increase as the global economy improves. Imports will also increase slightly. An improving economy will support increased domestic use, reducing stocks below 2010 levels. Cheese, nonfat dry milk (NDM), and whey prices are forecast higher in the face of improved demand and tighter supplies. However, butter prices are expected to be below 2010 levels. Nonetheless, both Class III and Class IV prices are forecast to be higher than 2010 as higher cheese and whey prices support the Class III price and stronger NDM prices more than offset weaker butter prices and support the Class IV price. The all milk price is forecast at \$15.70 to \$16.70 per cwt for 2011.

Forecast milk supply in 2010 is raised slightly from last month reflecting a slower decline in cow numbers and stronger expected growth in milk per cow. Cheese and whey price forecasts are lowered, resulting in a lower Class III price. Butter and NDM price forecasts are raised and the Class IV price increased. The all milk price is forecast to average \$15.65 to \$16.15 per cwt.

COTTON: The 2010/11 U.S. cotton projections include higher supplies offset by higher exports relative to last season, resulting in marginally lower ending stocks. Production is projected at 16.7 million bales, which is based on the March 31 *Prospective Plantings*, combined with 7-percent abandonment and a yield of 815 pounds per harvested acre. Projected abandonment is reduced from the 10-year average of 11 percent due to unusually favorable soil moisture in Texas. Domestic mill use is projected at 3.3 million bales, a marginal reduction from 2009/10. Exports are projected to rise 1.5 million bales from 2009/10 to 13.5 million, as foreign demand is expected to outpace supply. Ending stocks are projected at 3.0 million bales, the lowest since 1995/96. The projected range for the marketing-year average price received by producers is 60 to 74 cents per pound.

World cotton production is projected to rise nearly 11 million bales in 2010/11, but supplies will increase less than 1 percent from last season owing to sharply lower beginning stocks. Production is expected to rise in nearly all cotton-producing countries, with the United States, India, Brazil, and Pakistan accounting for about 70 percent of the increase. World consumption is projected to rise 2.8 percent, supported by economic recovery while at the same time constrained by limited supplies. An increase in China's imports to 11.5 million bales is boosting world trade. With a slight increase in production and declining stocks, China will need to rely on imports to sustain a projected 3 percent increase in consumption. World ending stocks are projected to decline 2.6 million bales to 50.1 million. The stocks-to-consumption ratio of 42 percent is the lowest since 1994/95.

Revisions to the 2009/10 balance sheets show higher beginning stocks, higher production, and lower consumption, resulting in an increase of 1.8 million bales in world ending stocks. China accounts for most of the increase, due to higher production and imports. China's production is raised 1.0 million bales based on reported higher production for Xinjiang; imports are raised 500,000 bales reflecting activity to date. Consumption is reduced for Pakistan, Turkey, and the United States, but is raised for India and Vietnam. U.S. 2009/10 production is raised 38,000 bales consistent with NASS's final production estimate. The forecast range for the marketing-year average price received by producers is lowered 1 cent on the upper end of the range.

Approved by the Secretary of Agriculture and the Chairperson of the World Agricultural Outlook Board, Gerald A. Bange, (202) 720-6030. This report was prepared by the Interagency Commodity Estimates Committees.

=====

Note: Totals may not add due to rounding. 1/ Marketing year beginning September 1 for corn and sorghum; June 1 for barley and oats. 2/ For a further breakout of food, seed, & industrial corn use, see the ERS Feed Outlook table 5 or Feed Grains Database at "www.ers.usda.gov/data/feedgrains". 3/ Marketing-year weighted average price received by farmers. * Planted acres reported in the March 31, 2010, "Prospective Plantings." For corn, harvested acres projected based on historical abandonment and derived demand for silage. Projected corn yield based on the simple linear trend of the national average yield for 1990-2009 adjusted for 2010 planting progress.

Exports 8/	26.9	33.0	31.0
Use, total	53.9	65.0	63.0
Ending stocks	8.0	13.2	20.7
Avg. farm price (\$/cwt) 6/	24.80	17.65-17.85	14.50-15.50

Note: Totals may not add due to rounding. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 2008/09-1.4; 2009/10-2.4; 2010/11-2.4. 3/ Residual includes unreported use, processing losses, and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Includes rough rice and milled rice exports. Milled rice exports are converted to an equivalent rough basis. 5/ Expressed as a percent-- the national average milling yield calculated by the Farm Service Agency (FSA) from warehouse stored loan data for long, medium, and short grain rice. The 2010/11 milling yield is calculated using the previous five-year average, which are annually weighted by production of each rice class. 6/ Marketing-year weighted average price received by farmers. 7/ Includes imports. 8/ Exports by type of rice are estimated. * Planted acres reported in March 31, 2010, "Prospective Plantings." Harvested acres are estimated using the average harvested-to-planted ratios by State and rice class, 2005-2009. Projected yield is derived from the trend yields by rice class for the period, 1990-2009.

=====

Note: Reliability calculations at end of report.
 1/ Marketing year beginning September 1 for soybeans; October 1 for soybean oil and meal. 2/ Prices: soybeans, marketing year weighted average price received by farmers; for oil, simple average of crude soybean oil, Decatur; for meal, simple average of 48 percent, Decatur. 3/ Based on October year crush estimate of 1,745 million bushels. *Planted acres are reported in the March 31 Prospective Plantings. Harvested acres based on 5-year average planted to harvested ratios by state. Projected yield based on 1989-2009 trend analysis.

1/ Fiscal years beginning Oct 1. Includes Puerto Rico. Historical data are from FSA, "Sweetener Market Data" except imports (U.S. Customs Service, Census Bureau). 2/ Production projections for 2010/11 are based on March 31 Prospective Plantings and trend yields. 3/ For 2010/11, includes only U.S. commitments under current trade agreements, minus shortfall of 160,000 tons. The Secretary will establish the actual level of the TRQ at a later date. 4/ Includes sugar under the re-export and polyhydric alcohol programs. 5/ For 2008/09, other high-tier (0) and other (0). For 2009/10, other high-tier (75) and other (0). For 2010/11, other high-tier (10) and other (0). 6/Combines SMD deliveries for domestic human food use, SMD miscellaneous uses, and the difference between SMD imports and WASDE imports. 7/ Transfers to sugar-containing products for reexport, and for nonedible alcohol and feed.

Use, total	16.86	15.40	16.80
Unaccounted 3/	-0.33	0.03	0.00
Ending stocks	6.34	3.10	3.00
Avg. farm price 4/	47.8	61.5-64.5	60.0-74.0

1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Reflects the difference between the previous season's supply less total use and ending stocks based on Bureau of Census data. 4/ Cents per pound for upland cotton. * Planted area as reported in March 31 "Prospective Plantings." Projected harvested area is based on the 2000-2009 average abandonment, weighted by region and adjusted to reflect unusually favorable soil moisture in the Southwest. Projected yield per harvested acre is based on 2005-2009 average yields, weighted by region.

1/ Marketing year beginning August 1. Totals may not add exactly and trade may not balance due to rounding and other factors. 2/ Generally reflects cotton lost or destroyed in the marketing channel; for Australia, Brazil, China, and the United States, reflects the difference between implicit stocks based on supply less total use and indicated ending stocks. 3/ Less than 5,000 bales. 4/ Includes Egypt and Syria in addition to the countries and regions listed. 5/ Azerbaijan, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan. 6/ Benin, Burkino Faso, Cameroon, Central African Republic, Chad, Cote d'Ivoire, Mali, Niger, Senegal, and Togo. 7/ Argentina, Australia, Brazil, Paraguay, South Africa, Tanzania, and Zimbabwe. 8/ In addition to the countries and regions listed, includes Hong Kong, Japan, Russia, South Korea, and Taiwan. 9/ Includes intra-EU trade.

1/ Simple average of monthly prices calculated by AMS from NASS weekly average dairy product prices for class price computations. 2/ Annual Class III and Class IV prices are the simple averages of monthly minimum Federal order milk prices paid by regulated plants for milk used in the respective classes. All milk price is the simple average of monthly prices received by farmers for milk at average test. 3/ Does not reflect any deductions from producers as authorized by legislation.

Note: Tables on pages 35-37 present a 29-year record of the differences between the May projection and the final estimate. Using world wheat production as an example, changes between the May projection and the final estimate have averaged 15.2 million tons (2.7%) ranging from -35.0 to 30.0 million tons. The May projection has been below the estimate 17 times and above 12 times.

1/ See pages 35 and 36 for record of reliability for U.S. wheat, rice, soybeans, and cotton. 2/ Final estimate for 1981/82-2008/09 is defined as the first November estimate following the marketing year, and for 2009/10 last month's estimate. 3/ Calendar years 1982 thru 2009 for meats, eggs, and milk. Final for animal products is defined as latest annual production estimate published by NASS.

Related USDA Reports

The *WASDE* report incorporates information from a number of statistical reports published by USDA and other government agencies. In turn, the *WASDE* report provides a framework for more detailed reports issued by USDA's Economic Research Service and Foreign Agricultural Service. For more information on how the *WASDE* report is prepared, go to:

<http://www.usda.gov/oce/commodity/wasde>.

Supply and Demand Database

The Foreign Agricultural Service publishes Production, Supply, and Demand Online, a comprehensive database of supply and demand balances by commodity for 190 countries and regions at <http://www.fas.usda.gov/psd/online>. Data for grains, oilseeds, and cotton are updated monthly and data for other commodities are updated less frequently.

Foreign Production Assessments

Preliminary foreign production assessments and satellite imagery analysis used to prepare the *WASDE* report are provided by the Production Estimates and Crop Assessment Division (PECAD) of the Foreign Agricultural Service. PECAD is located at www.pecad.fas.usda.gov/.

Metric Conversion Factors

1 Hectare = 2.4710 Acres

1 Kilogram = 2.20462 Pounds

Metric-Ton Equivalent	= Domestic Unit	Factor
Wheat & Soybeans	bushels	.027216
Rice	cwt	.045359
Corn, Sorghum, & Rye	bushels	.025401
Barley	bushels	.021772
Oats	bushels	.014515
Sugar	short tons	.907185
Cotton	480-lb bales	.217720

NOTE:

USDA is introducing two new formats for the *World Agricultural Supply and Demand Estimates (WASDE)* report. USDA will post XML and Microsoft Excel file versions of the report by 12:00 noon following the regular 8:30 a.m. EST release of the report in TXT and PDF file formats. The new file versions will be posted at:

www.usda.gov/oce/commodity/wasde/newformat.htm.

There will be no change in layout or page numbers.

The monthly WASDE report will continue to be released at 8:30 a.m. EDT. In addition to the current TXT and PDF versions, USDA will also post XML and Microsoft Excel file versions of the report by noon EST on release days in May and June at:

www.usda.gov/oce/commodity/wasde/newformat.htm

These new formats are being made available for 2 months for testing purposes. Beginning on July 9, 2010, the WASDE report will be released in all four formats at 8:30 a.m. EDT on the OCE Website. On Oct. 8, 2010, USDA will discontinue issuing the TXT file version.
